*Conservation Monitoring in Freshwater Habitats* Clive Hurford, Michael Schneider, Ian Cowx, 2009-12-09 As in the terrestrial environment most data collection from freshwater habitats to date falls into the survey surveillance or research categories The critical difference between these exercises and a monitoring project is that a monitoring project will clearly identify when we need to make a management response A Model for Conservation Management and Monitoring Monitoring as defined by Hellawell is essentially a tool of practical conservation management and Fig 1 1 shows a simple but effective model for nature conservation management and monitoring The need for clear decision making is implicit in this model First we must decide what would represent a favourable state for the key habitat or species and then we must decide when to intervene if the state is or becomes unfavourable A third often

overlooked but equally important decision concerns when we would consider the habitat or species to have recovered this is unlikely to be the same point that we became concerned about it This decision not only has resource implications it can also have major implications for other habitats and species prey species are an obvious example All of these decisions are essential to the development of an efficient and effective monitoring project

**Monitoring Ecological Change** Ian F. Spellerberg, 1991-10-25 Living communities are continuously changing both as a result of natural processes and of human activities It is essential for us to have effective biological and ecological monitoring programs in order to detect these changes and understand the factors that influence them In the first part of the book the roles of local national and international organizations that implement monitoring programs are discussed and assessed In the second section of the book a wide range of examples are used to explain and evaluate methods of data collection analysis and interpretation The final section focuses on the important applications of biological monitoring such as pollution control land use management monitoring rare species and post environmental impact assessment
