Depression João F. Oliveira,Catarina A. Gomes,Sandra H. Vaz,Nuno Sousa,Luisa Pinto,2016-10-24 Major depression is a highly prevalent disorder that poses a significant social burden in society nowadays The pathophysiology of this disease is still poorly understood but growing evidence suggests that impaired neuron and glial plasticity may be a key underlying mechanism for the precipitation of the disorder One of the most surprising findings in this field was the involvement of glial cells in the pathophysiology of major depression and in the action of antidepressants namely in mechanisms related with adult neurogenesis imbalances or dendritic arborization impairments In particular several works refer to alterations in the morphology and numbers of astrocytes microglia and oligodendrocytes in the context of depression in human patients or animal models of depression These observations were linked to functional evidences and suggested to underlie the pathophysiology of depression Among others these include impairments in the cross talk between glia and neurons changes

in the level of neurotransmitter or immunoactive substances myelination status synapse formation maintenance or elimination In addition to the implication of glia in the pathophysiology of depression a number of studies is ascribing glia pathways to classically accepted antidepressant mechanisms Therefore it is noteworthy to elucidate the role of glia in the effect provided by antidepressant treatment in order to better understand secondary effects and elucidate alternative targets for treatment

and hydraulic properties of pervious concrete while also examining their hydrological design and water quality The ability to upscale the use of pervious concrete in construction applications is investigated through field evaluation lifecycle assessment and performance prediction using artificial intelligence The volume presents the latest findings in pervious concrete research filling a gap in previous relevant publications Addresses both pervious concrete design and performance evaluation Follows a theory to practice approach Provides a one stop shop covering the mechanical durability and hydraulic aspects of pervious concrete made with a range of materials *O-GlcNAcylation: Expanding the Frontiers* Tarik Issad, Tony Lefebvre, 2020-01-23

The Mononuclear Phagocyte System in Infectious Disease Geanncarlo Lugo-Villarino, Céline Cougoule, Etienne Meunier, Yoann Rombouts, Christel Vérollet, Luciana Balboa, 2019-10-04 The Mononuclear Phagocyte System MPS of vertebrates is composed of monocytes macrophages and dendritic cells Together they form part of the first line of immune defense against a variety of pathogens bacteria fungi parasites and viruses and thus play an important role in maintaining organism homeostasis The mode of transmission type of replication and mechanism of disease causing differ significantly for each pathogen eliciting a unique immune response in the host Within this context the MPS acts as both the sentinel and tailor of the immune system As sentinels MPS cells are found in blood and within tissues throughout the body to patrol against pathogenic insult The strategy to detect microbial non self relies on MPS to recognize conserved microbial products known as pathogen associated molecular pattern PAMPs PAMPs recognition represents a checkpoint in the response to pathogens and relies on conserved pattern recognition receptors PRRs Upon PRR engagement MPS mount a cell autonomous attack that includes the internalization and compartmentalization of intracellular pathogens into toxic compartments that promote destruction In parallel MPS cells launch an inflammatory response composed of a cellular arm and soluble factors to control extracellular pathogens In cases when innate immunity fails to eliminate the invading microbe MPS serves as a tailor to generate adaptive immunity for pathogen eradication and generation of memory cells thus ensuring enhanced protection against re infection Indeed MPS cell functions comprise the capture process migration and delivery of antigenic information to lymphoid organs where type 1 immunity is tailored against intracellular microbes and type 2 immunity against extracellular pathogens However this potent adaptive immunity is also a double edge sword that can cause aberrant inflammatory disorders like autoimmunity or chronic inflammation For this reason MPS also tailors tolerance immunity against unwanted inflammation Successful clearance of the microbe results in its destruction and proper collection of debris resolution of inflammation and tissue healing for which MPS is essential Reciprocally as part of the evolutionary process taking place in all organisms microbes evolved strategies to circumvent the actions bestowed by MPS cells Multiple pathogens modulate the differentiation maturation and activation programs of the MPS as an efficient strategy to avoid a dedicated immune response Among the most common evasion strategies are the subversion of phagocytosis inhibition of PRR mediated immunity resistance to intracellular killing by reactive oxygen and nitrogen species restriction of phagosome

maturation modulation of cellular metabolism and nutrient acquisition regulation of cell death and autophagy and modulation of pro inflammatory responses and hijacking of tolerance mechanisms among others The tenet of this eBook is that a better understanding of MPS in infection will yield insights for development of therapeutics to enhance antimicrobial processes or dampen detrimental inflammation for the host s benefit We believe that contributions to this topic will serve as a platform for discussion and debate about relevant issues and themes in this field Our aim is to bring expert junior and senior scientists to address recent progress highlight critical knowledge gaps foment scientific exchange and establish conceptual frameworks for future MPS investigation in the context of infectious disease

Neutron Methods for Archaeology and Cultural

Heritage Nikolay Kardjilov, Giulia Festa, 2016-12-15 This book provides an extensive overview of the application of neutron characterization techniques in cultural heritage to a broad audience and will be of interest to both scientists and non scientists in the field Archaeologists paleontologists restaurateurs and conservators historians and collectors will be fascinated by the wealth of information that can be obtained using neutron techniques while material scientists and engineers will find details of the experimental techniques and materials properties that can be determined Neutrons due to their weak interactions with materials provide a penetrating but non invasive probe of bulk properties They allow the characterization of the composition and mechanical properties of materials helping to answer questions related to the dating the manufacturing process or the state of degradation of artefacts They allow detailed interrogation of the internal structures of objects that may be otherwise hidden from view The first section of the book is dedicated to stories describing spectacular discoveries brought about by the use of neutron techniques in a range of applications The second section covers the experimental techniques in appropriate detail basic principles limitations and fields of application
