

Yale Veracitor™ GP-VX Series

This series of trucks is available in three configurations to meet and exceed your material handling application requirements. The Veracitor™ Productivity truck delivers maximum performance for medium to heavy-duty applications with state-of-the-art features and industry leading power. The Veracitor™ Value truck provides excellent performance for standard and medium-duty applications and is optimized for lowest hourly cost of operation. The Veracitor™ VX truck offers first-rate performance for standard-duty applications and is geared to minimize your cost of acquisition without compromising performance.

Yale Veracitor™ VX Engines feature a rigid cast iron block and main bearing caps. Modular iron crankshaft is supported on five main bearings. The camshaft is cast iron. Hydraulic valve lifters are utilized to eliminate the need for manual adjustment. All engines include hardened exhaust valve seats. The GM engine features hardened intake and exhaust valve seats with stellite coated valves for superior durability. All engines are EPA emissions compliant and feature closed loop emissions regulation systems that continually monitor exhaust and adjust fuel/air mix as necessary. The GM engine also features an electronic throttle for precise performance and control.

UL ratings of LP, G, or D are standard in relation to engine option selection.

Fuel System

The Mazda LPG engine uses a single barrel carburetor with an LPG injector and a regulator/vaporizer. The Engine Control Unit controls the LPG injector fueling, and the carburetor and the regulator are not adjustable. The Gasoline engine uses Electronic Gasoline Injection (EGI). This is a port fuel injection system that uses Mass Air Flow sensor input to the ECU to determine fueling requirements. The GM LP and Gas engines use sequential port fuel injection. The GM LP

engines use a vaporizer/regulator to convert the fuel from a liquid to a gas for vapor injection. The Engine Control Unit electronically controls the fuel, air, and spark advance to provide the necessary torque. The engine control unit's inputs include manifold air pressure, manifold air temperature, engine coolant temperature, accelerator pedal position, throttle position, engine speed, cam signal, and oxygen sensor signal. Yanmar Diesel engines use a fuel injection pump, with one fuel metering plunger and distributor mechanism to deliver the fuel to the right cylinder. A rotary distributor ensures that the fuel is sent in the proper order.

Transmission

There are four transmission selections available with multiple engine configurations that will handle a wide variety of material handling applications. All transmissions feature electronic inching (requires no adjustment), electric shift control, neutral start switch, and anti-restart protection. A single pedal controls both inching and braking. Optional dual inch/brake pedals are available for operators who prefer this design. A 10 micron filter protects the transmission from abrasive contaminants.

The Techtronix 100 features Auto Deceleration through the controlled application of clutch packs, and also reduces tire spin by precisely regulating engine speed during controlled power reversals. The Techtronix 200 includes the Techtronix 100 features, and also enables Auto Speed Hydraulics with Automatic Inching Control. This feature automatically increases engine RPM's as hydraulic functions are actuated, while maintaining control over vehicle speed. The throttle response management feature provides travel speed as a direct result of pedal position, improving truck control. The Techtronix 200X includes the Techtronix 200 features and adds two-speed functionality for extended drawbar pull applications.

Cooling System employs a 17" blade pusher-type fan. A permanently lubricated water pump and a high capacity, cross-flow radiator ensure rapid heat dissipation. The sealed cooling system operates at a pressure of 15 psi and includes a coolant recovery tank for visual inspection of coolant level. The transmission oil cooler is integrated into the radiator and is located in the side tank. The optional combi-cooler radiator features an externally mounted transmission oil cooler for increased heat transfer capability. All radiators are soft-mounted for excellent durability.
