Mobile Computing Applications and Services MobiCASE held in San Diego California during October 26-29 2009. It was sponsored by ICST and held in conjunction with the First Workshop on Innovative Mobile User Interactivity WIMUI. MobiCASE highlights state-of-the-art academic and industry research work in main topics above the OSI transport layer with an emphasis on complete end-to-end systems and their components. Its vision is largely influenced by what we see in the consumer space today: high-end mobile phones, high bandwidth wireless networks, novel consumer and enterprise mobile applications, scalable software infrastructures, and of course an increasingly larger user base that is moving towards an almost a mobile lifestyle. This year's program spanned a wide range of research that explored new features, algorithms, and infrastructure related to mobile platforms. We received submissions from many countries around the world with a high number from Europe and Asia in addition to the many from North America. Each paper received at least three independent reviews from our Technical Program Committee members during the Spring of 2009 with final results coming out in July. As a result of the review process, we selected 15 high quality papers and complemented them with six invited submissions from leading researchers, reaching the final count of 21 papers in the program.

Mobile Multimedia Processing Xiaoyi Jiang, Matthew Y. Ma, Chang Wen Chen, 2010-03-25. The portable device and mobile

phone market has witnessed rapid growth in the last few years with the emergence of several revolutionary products such as mobile TV converging iPhone and digital cameras that combine music phone and video functionalities into one device. The proliferation of this market has further benefited from the competition in software and applications for smart phones such as Google's Android operating system and Apple's iPhone App Store stimulating tens of thousands of mobile applications that are made available by individual and enterprise developers. Whereas the mobile device has become ubiquitous in people's daily life not only as a cellular phone but also as a media player, a mobile computing device and a personal assistant, it is particularly important to address challenges timely in applying advanced pattern recognition, signal information and multimedia processing techniques and new emerging networking technologies to such mobile systems. The primary objective of this book is to foster interdisciplinary discussions and research in mobile multimedia processing techniques, applications and systems as well as to provide stimulus to researchers on pushing the frontier of emerging new technologies and applications. One attempt on such discussions was the organization of the First International Workshop of Mobile Multimedia Processing (WMMP 2008) held in Tampa, Florida, USA on December 7, 2008. About 30 papers were submitted from 10 countries across the USA, Asia and Europe.
