Hurricane Manuel And Ingrid:

Sustainable Development Research and Practice in Mexico and Selected Latin American Countries Walter Leal Filho, Ricardo Noyola-Cherpitel, Pedro Medellín-Milán, Valeria Ruiz Vargas, 2017-11-27 This book provides an essential overview of sustainable development research in Mexico. It discusses the empirical research methods and findings as well as practical initiatives and projects being pursued in Mexico and other countries in the region. Although a number of Mexican universities are now conducting high quality research on matters related to sustainable development there are few publications that offer a multidisciplinary overview of research efforts for a broader audience. This book addresses that gap in the literature providing researchers at Mexican universities including those from other countries working in Mexico with an opportunity to present their work i.e. curriculum innovations, empirical work, activities, case studies and practical projects. As such it fosters the exchange of information, ideas and experiences, successful initiatives and best practices. **Of Rainfalls and Disasters** Juan Manuel Rodríguez Esteves, Disasters associated with natural phenomena such as earthquakes, floods, droughts etcetera are intensifying damages that translate into deaths, the loss of infrastructure and the interruption of economic activities. The accelerated growth of cities frequently incorporates new areas that are susceptible to certain hazards, leaving society increasingly exposed due to a mismanagement of land. Since the 1990s the social sciences have developed the approach of vulnerability which considers the conditions of weakness of a society to cope with hazards. We now know that risk is socially constructed and so disasters are not only a result of the intensity of the geophysical phenomena that unleash them but also of the contexts of vulnerability present when a phenomenon takes place. The aim of this work is to show how the risk of flood disasters is constructed in Tijuana, Baja California with four main elements as our starting point: An examination of floods since the late 19th century; the voice of the actors present for flooding events; a theoretical model to understand the relationship between the hazard and the magnitude of the risk; and recommendations for disaster risk management at a local level. **Emergency and Disaster Management: Concepts, Methodologies, Tools, and Applications** Management Association, Information Resources, 2018-07-06 In a world of earthquakes, tsunamis and terrorist attacks, emergency response plans are crucial to solving problems, overcoming challenges and restoring and improving communities that have been affected by these catastrophic events. Although the necessity for quick and efficient aid is understood, researchers and professionals continue to strive for the best practices and methodologies to properly handle such significant events. *Emergency and Disaster Management: Concepts, Methodologies, Tools and Applications* is an innovative reference source for the latest research on the theoretical and practical components of initiating crisis management and emergency response. Highlighting a range of topics such as preparedness and assessment, aid and relief and the integration of smart technologies, this multi-volume book is designed for emergency professionals, policy makers, practitioners, academicians and researchers interested in all aspects of disaster crisis and emergency studies. **The Future of Disaster**

Management in the U.S. Amy LePore, 2016-12-08 U S congressional debates over the last few years have highlighted a paradox although research demonstrates that emergencies are most effectively managed at the local level fiscal support and programmatic management in response to disasters has shifted to the federal level While the growing complexity of catastrophes may overwhelm local capacities and would seem to necessitate more federal engagement can a federal approach be sustainable and can it contribute to local capacity building This timely book examines local capacity building as well as the current legal policy and fiscal framework for disaster management questioning some of the fundamentals of the current system exploring whether accountability and responsibilities are correctly placed offering alternative models and taking stock of the current practices that reflect an effective use of resources in a complex emergency management system The Future of Disaster Management in the U S will be of interest to disaster and emergency managers as well as public servants and policy makers at all levels tasked with responding to increasingly complex catastrophes of all kinds

Self-Defense in Mexico Luis Hernández Navarro, 2020-03-02 In Mexico and across other parts of Latin America local Indigenous peoples have built community policing groups as a means of protection where the state has limited control over and even complicity in crime and violence Luis Hernández Navarro a leading Mexican journalist offers a riveting investigation of these armed self defense groups that sprang up around the time of the 1994 Zapatista uprising in Chiapas Available in English for the first time the book spotlights the intense precarity of everyday life in parts of Mexico Hernández Navarro shows how the self defense response which now includes wealthier rancher and farmer groups is being transformed by Mexico's expanding role in the multibillion dollar global drug trade by foreign corporations extraction of raw minerals in traditionally Indigenous lands and by the resulting social changes in local communities But as Hernández Navarro acknowledges self defense is highly controversial Community policing may provide citizens with increased agency but for government officials it can be a dangerous threat to the status quo Leftists and liberals are wary of how the groups may be linked to paramilitary forces and vulnerable to manipulation by drug traffickers and the government alike This book answers the urgent call to understand the dangerous complexities of government failures and popular solutions *Management*
