

# An overview of the integrative research review

The integrative literature review has many benefits to the scholarly reviewer, including evaluating the strength of the scientific evidence, identifying gaps in current research, identifying the need for future research, bridging between related areas of work, identifying central issues in an area, generating a research question, identifying a theoretical or conceptual framework, and exploring which research methods have been used successfully. The 5-stage integrative review process includes (1) problem formulation, (2) data collection or literature search, (3) evaluation of data, (4) data analysis, and (5) interpretation and presentation of results. Maintaining scientific integrity while conducting an integrative research review involves careful consideration to threats to validity. Strategies to overcome these threats are reviewed. The integrative review methodology must involve detailed and thoughtful work, the outcome of which can be a significant contribution to a particular body of knowledge and, consequently, to practice and research.

As specialization increases and the volume of completed research expands, the scholarly individual is constantly challenged to possess an accurate and current understanding of information pertinent to his or her area of practice and/or research. Integrative reviews assist in maintaining a current knowledge base in a particular research area.<sup>1</sup> An integrative review of the literature is defined as one in which "past research is summarized by drawing overall conclusions from many studies."<sup>2(p1)</sup> Through the process of systematically analyzing and summarizing the research literature, a well-prepared integrative review can precisely represent the state of the current research literature. The integrative literature review can also be used to evaluate the strength of the scientific evidence, identify gaps in current research, identify the need for future research, build a bridge between related areas of work, identify central issues in an area, generate a research question, identify a theoretical or conceptual framework, and explore which research methods have been used successfully.<sup>1</sup>

Several terms are closely associated with the integrative review including literature review, systematic review, and meta-analysis. A literature review is "a critical summary of research on a topic of interest, often prepared to put a research problem in context."<sup>3(p12)</sup> The literature review is frequently found at the beginning of scholarly research articles providing a foundation for the proposed research questions and methods.<sup>4</sup> A systematic review is "carefully synthesized research evidence designed to answer focused

clinical questions."<sup>5(p)</sup> Stevens notes, "systematic reviews are also known as evidence summaries and integrative reviews."<sup>6(p)</sup> Finally, a meta-analysis is "a technique for quantitatively combining and thus integrating the results of multiple studies on a given topic."<sup>7(p12)</sup> In addition, primary research should be differentiated from the integrative review process. Table 1 delineates the similarities and differences.

Generally, there are 4 questions that the reviewer answers when a body of knowledge is evaluated using the integrative review technique. (1) What is known? (2) What is the quality of what is known? (3) What should be known? and (4) What is the next step for research or practice? The answers to these questions are discovered through the integrative review process. The reviewer evaluates the current state of knowledge, judging its quality so that the future directions for research studies in the area are clearer.

## Definitions

The process of conducting an integrative literature review should be approached with the same intensity and scientific rigor used when conducting primary research. Cooper<sup>1</sup> conceptualizes the integrative review as occurring in 5 stages: (1) problem formulation, (2) data collection or literature search, (3) evaluation of data, (4) data analysis, and (5) interpretation and presentation of results.

To focus the integrative review, the reviewer must begin by defining the purpose,<sup>1</sup> the problem,<sup>1</sup> and the

Integrating the Human Sciences Rick Szostak, 2022-11-15 What if we recognized that the human sciences collectively investigate a few dozen key phenomena that interact with each other Can we imagine a human science that would seek to stitch its understandings of this system of phenomena into a coherent whole If so what would that look like This book argues that we are unlikely to develop one unified theory of everything Our collective understanding must then be a map of the myriad relationships within this large but finite and manageable system coupled with detailed understandings of each causal link and of important subsystems The book outlines such a map and shows that the pursuit of coherence and a more successful human science enterprise requires integration recognizing the strengths and weaknesses of different methods and theory types and the pursuit of terminological and presentational clarity It explores how these inter connected goals can be achieved in research teaching library classification public policy and university administration These suggestions are congruent with and yet enhance other projects for reform of the human sciences This volume is aimed at any scholar or student who seeks to comprehend how what they study fits within a broader understanding **Handbook of**

Tamdgidi,2021-10-01 In this OKCIR Research Report hermeneutic sociologist Khayyami scholar and founding director of Omar Khayyam Center for Integrative Research OKCIR Mohammad H Behrooz Tamdgidi Ph D reports having solved the mystery of the code associated with the so called Somerton Man or Tam m Shud case The mysterious code appearing on the back page of a first edition copy of Edward FitzGerald's *The Rubaiyat of Omar Khayyam* found months following the death of The Somerton Man TSM in South Adelaide Australia on Dec 1 1948 was a suicide contemplation and planning note he was poetically drafting for himself in the form of a quatrain on the back of his copy of *The Rubaiyat* giving a gist of why and how he planned to carry out a deliberately mystery laden suicide as his last dance for a lasting life The code was the creative DNA of his suicide plot It was written in the Tam m Shud transliteration style in this case not from Persian but from Arabic with which he must have been familiar either natively due to coming ancestrally from the ethnically diverse and widely multilingual Russian Caucasus and or by training and education In other

words the Tam m Shud torn out piece found in TSM s fob pocket not only served as a bread crumb lead to his suicide note it also offered the key to the code s deciphering DNA is a self replicating matter that reproduces the basic structure of a substance TSM s code offers the DNA of his last dance performance in public hoping of a lasting life one that was sketched amid his medical suffering He was reflecting on his life terminal illness and expected imminent death while reading the meanings conveyed about life and death in FitzGerald s translation of Omar Khayyam s Rubaiyat a work of art that offered TSM a practical and proven example of how one can physically die but endure in human memory and spirit forever This report mainly focuses on deciphering TSM s code but the findings are then used to shed brief new light on one and or another alternative wider story of what took place in Adelaide in 1948 in the years leading to it and in the decades thereafter The report invites readers to rethink the relevance of Omar Khayyam s poetry to the case and also asks a pertinent question about another fold of the mystery that is why did it take so long to decipher a code that could have actually been decoded much earlier The Somerton Man or Tam m Shud case has important lessons for us beyond the confines of the personal troubles of a man and those he knew inviting us to use our sociological imaginations to explore such troubles in relation to the public issues that concern us all beyond the shores of Australia and beyond the national and disciplinary walls fragmenting our lives universities and scientific methods in favor of transcultural and transdisciplinary modes of inquiry The report ends with a dancing celebration for deciphering the code as a new window to learning the true story and possible identity of the Somerton Man

**Systems Analytics and Integration of Big Omics Data** Gary Hardiman, 2020-04-15 A genotype is

essentially an organism's full hereditary information which is obtained from its parents. A phenotype is an organism's actual observed physical and behavioral properties. These may include traits such as morphology, size, height, eye color, metabolism, etc. One of the pressing challenges in computational and systems biology is genotype to phenotype prediction. This is challenging given the amount of data generated by modern Omics technologies. This Big Data is so large and complex that traditional data processing applications are not up to the task. Challenges arise in collection, analysis, mining, sharing, transfer, visualization, archiving, and integration of these data. In this Special Issue, there is a focus on the systems level analysis of Omics data, recent developments in gene ontology annotation, and advances in biological pathways and network biology. The integration of Omics data with clinical and biomedical data using machine learning is explored. This Special Issue covers new methodologies in the context of gene-environment interactions, tissue-specific gene expression, and how external factors or host genetics impact the microbiome.
