Exercise and Biomechanical Intervention in the Prevention, Management and Rehabilitation of Neuro-musculoskeletal Disorders, volume II Qichang Mei, Liming Shu, Justin Fernandez, 2024-11-19 Neuromusculoskeletal biomechanics has been a popular topic in understanding the disorders of the human motor system during daily clinical and sport specific activities Recent studies have been conducted to examine the neuromusculoskeletal control e.g. postural control gait stability and falling the mechanisms of sports injuries e.g. Anterior Cruciate Ligament Achilles Tendon hamstring strain and bone fracture and clinical diseases e.g. joint Osteoarthritis and cerebral palsy etc and the task based functional assessment However previous biomechanical approaches such as the traditional lab based experiments musculoskeletal MSK modeling and Finite Element FE simulation are employed separately to investigate the above biomechanical problems In recent decades several excellent and open source platforms or software have been developed based on the rapid development of technology and advances in interdisciplinary fusion The cross platform compatibility challenges were overcome specifically for subject specific to population based studies experimental scenarios lab motion capture to intelligent wearables and markerless sensing and rigid to continuum tissue loading formation adaptability and damage All these techniques when combined may offer promising plausibility to understand motor disorders

or diseases As a result this Research Topic will serve as a compendium of techniques mentioned above but not limited to for understanding neuromusculoskeletal disorders with a special interest in fusion with Digital Technologies This Research Topic aims to gather Original Research articles and Review articles that integrate current state of the art neuromusculoskeletal including musculoskeletal neuromuscular or neuroskeletal modeling approaches and Digital Technologies Digital Twin DT to investigate the complex biomechanical mechanisms for the prevention diagnosis treatment and rehabilitation of disorders in the human motor system Moreover this Research Topic would like to publish studies on experiment driven and muscle driven computational MSK and FE modeling of neuro muscular tendon bone and joint ligament and cartilage tissues for the injury and rehabilitation of the musculoskeletal system

Concepts of Proof in Mathematics, Philosophy, and Computer Science Dieter Probst,Peter Schuster,2016-07-25 A proof is a successful demonstration that a conclusion necessarily follows by logical reasoning from axioms which are considered evident for the given context and agreed upon by the community It is this concept that sets mathematics apart from other disciplines and distinguishes it as the prototype of a deductive science Proofs thus are utterly relevant for research teaching and communication in mathematics and of particular interest for the philosophy of mathematics In computer science moreover proofs have proved to be a rich source for already certified algorithms This book provides the reader with a collection of articles covering relevant current research topics circled around the concept proof It tries to give due consideration to the depth and breadth of the subject by discussing its philosophical and methodological aspects addressing

foundational issues induced by Hilbert's Programme and the benefits of the arising formal notions of proof without neglecting reasoning in natural language proofs and applications in computer science such as program extraction

Into the Extreme Valerie Olson, 2018-05-22

The first book length in depth ethnography of U S human spaceflight What if outer space is not outside the human environment but rather defines it This is the unusual starting point of Valerie Olson's Into the Extreme revealing how outer space contributes to making what counts as the scope and scale of today's natural and social environments With unprecedented access to spaceflight worksites ranging from astronaut training programs to life science labs and architecture studios Olson examines how U S experts work within the solar system as the container of life and as a vast site for new forms of technical and political environmental control Olson's book shifts our attention from space's political geography to its political ecology showing how scientists physicians and engineers across North America collaborate to build the conceptual and nuts and bolts systems that connect Earth to a specifically ecosystemic cosmos This cosmos is being redefined as a competitive space for potential economic resources social relations and political strategies Showing how contemporary U S environmental power is bound up with the production of national technical and scientific access to outer space Into the Extreme brings important new insights to our understanding of modern environmental history and politics At a time when the boundaries of global ecologies and economies extend far below and above Earth's surface Olson's new analytic frameworks help us understand how varieties of outlying spaces are known made and organized as kinds of environments whether terrestrial or beyond NASA's Human
