Prospects for quinoa adaptation and utilization in Eastern and Southern Africa Maliro, M.F.A., Abang, M.M., Mukankusi, C., Lung'aho, M., Fenta, B., Wanderi, S., Kapa, R., Okiro, O.A., Koma, E., Mwaba, C., Isse, M.M. and Bazile, D., Food and Agriculture Organization of the United Nations, 2021-01-22 Quinoa *Chenopodium quinoa* Willd is an emerging crop in the world with great potential to contribute to Africa's food and nutritional security. The increased popularity of quinoa in the last few years is attributed to the impact of activities carried out within the framework of the International Year of Quinoa IYQ2013 which helped greatly to raise awareness on the crop's multiple nutritional benefits and its expanding cultivation globally. The Food and Agriculture Organization (FAO) which championed the IYQ2013 has worked with developing countries in Africa which are grappling with food and nutrition insecurity to introduce and promote cultivation of quinoa. Production and utilization of quinoa is expected to significantly reduce food and nutrition insecurity and help farming communities adapt to climate change. FAO implemented a Technical Cooperation on quinoa titled Technical Assistance for the Strengthening of the Food System of Quinoa TCP/SFE 3406 implemented in 2014 to 2015. This project was designed to support the institutional capacities of seven countries including Djibouti, Ethiopia, Kenya, Somalia, South Sudan, Uganda, and Zambia in the production, evaluation, management, utilization, and marketing of Quinoa under diverse farming systems and agro-ecological zones. The project was implemented and led by the FAO Subregional office for Eastern Africa. SFE Quinoa evaluation trials that were conducted across multiple sites in the participating countries served as pilot adaptability studies for the crop. This technical paper presents key technological, institutional, and policy considerations for the successful introduction, adaptation, and utilization of quinoa in Africa. *Climate Impacts on Agricultural and Natural Resource Sustainability in Africa* Bal Ram Singh, Andy Safalaoh, Nyambilila A. Amuri, Lars Olav Eik, Bishal K. Sitaula, Rattan Lal, 2020-03-17 This book discusses knowledge-based sustainable agro-ecological and natural resource management systems and best practices for sustained agricultural productivity and ecosystem resilience for better livelihoods under a changing climate. With a focus on agriculture in Africa, the book assesses innovative technologies for use on smallholder farms and addresses some of the key Sustainable Development Goals to guide innovative responses and enhanced adaptation methods for coping with climate change. Contributions are based on Capacity Building for Managing Climate Change in Malawi (CABMACC), a five-year program with an overall goal to improve livelihoods and food security through innovative responses and enhanced capacity of adaptation to climate change. Readers will discover more about sustainable crop production, climate-smart agriculture, on-farm energy supply from biogas, and the potential of soil carbon sequestration in crop-livestock systems.

The African Food Environments Amos Laar, Kaleab Baye, Anna Lartey, Francis Zotor, Gershim Asiki, 2023-09-05 In many respects, the continent of Africa is in transition. Prominent among them currently is the nutrition transition. One consequence of the nutrition transition is the increase in prevalence of nutrition-related non-communicable diseases (NCDs) such as obesity.

type 2 diabetes cardiovascular diseases and certain cancers Although NCDs are a global public health problem the rate of increase in NCDs morbidity and mortality in some African countries is staggering This surge has been linked to modifiable environmental factors factors that facilitate the consumption of obesogenic energy dense nutrient poor foods rather than unrefined cereals fruits and vegetables It has long been recognized that the physical and social environments in which people live work and eat are critical determinants of their health More recently there has been a greater focus on the food environment as a key determinant of health Available evidence shows that unhealthy food environments drive unhealthy diets and unhealthy diet is one of four main risk factors for NCDs
