Electromagnetic Compatibility in Railways Ade Ogunsola, Andrea Mariscotti, 2012-08-14 A railway is a complex distributed engineering system the construction of a new railway or the modernisation of a existing one requires a deep understanding of the constitutive components and their interaction inside the system itself and towards the outside world The former covers the various subsystems featuring a complex mix of high power sources sensitive safety critical systems intentional transmitters etc and their interaction including the specific functions and their relevance to safety The latter represents all the additional possible external victims and sources of electromagnetic interaction EMC thus starts from a comprehension of the emissions and immunity characteristics and the interactions between sources and victims with a strong relationship to electromagnetics and to system modeling On the other hand the said functions are achieved and preserved and their relevance for safety is adequately handled if the related requirements are well posed and managed throughout the process from the beginning The link is represented by standards and their correct application as a support to analysis testing and demonstration

Handbook of Power Quality Angelo Bagгинi, 2008-07-31 Due to the complexity of power systems combined with other factors such as increasing susceptibility of equipment power quality PQ is apt to waver With electricity in growing demand low PQ is on the rise and becoming notoriously difficult to remedy It is an issue that confronts professionals on a daily basis but few have the required knowledge to diagnose and solve these problems Handbook of Power Quality examines of the full panorama of PQ disturbances with background theory and guidelines on measurement procedures and problem solving It uses the perspectives of both power suppliers and electricity users with contributions from experts in all aspects of PQ supplying a vital balance of scientific and practical information on the following frequency variations the characteristics of voltage including dips fluctuations and flicker the continuity and reliability of electricity supply its structure appliances and equipment the relationship of PQ with power systems distributed generation and the electricity market the monitoring and cost of poor PQ rational use of energy An accompanying website hosts case studies for each chapter demonstrating PQ practice how problems are identified analysed and resolved The website also includes extensive appendices listing the current standards mathematical formulas and principles of electrical circuits that are critical for the optimization of solutions This comprehensive handbook explains PQ methodology with a hands on approach that makes it essential for all practising power systems engineers and researchers It simultaneously acts

appears somewhat complacent The Committee is very concerned that there appears to be no one Government Department identified to take immediate lead responsibility should there be a severe space weather event The Government must make clear exactly where lead responsibility in relation to EMP disturbances lies both nationally and within the MoD Defence alone cannot protect against the threat of EMP It must be a concern of the National Security Council and civil contingency planners with proper standards of protection developed with the vital service industries most at risk The effects of a High Altitude Electro Magnetic Pulse Event as a result of a nuclear weapon exploded at high altitude would be so serious that only government action could be expected to mitigate it Security of satellites is a matter of growing concern as our reliance upon such systems and the sheer number of satellites in orbit increase
