Advanced artificial intelligence (AI)-based affective computing in online learning Tongguang Ni, Maozhen Li, Yizhang Jiang, 2023-05-17 *Principles of Neural Coding* Rodrigo

Quian Quiroga, Stefano Panzeri, 2013-05-06 Understanding how populations of neurons encode information is the challenge faced by researchers in the field of neural coding. Focusing on the many mysteries and marvels of the mind has prompted a prominent team of experts in the field to put their heads together and fire up a book on the subject. Simply titled *Principles of Neural Coding*, this book covers the complexities of this discipline. It centers on some of the major developments in this area and presents a complete assessment of how neurons in the brain encode information. The book's collaborators contribute various chapters that describe results in different systems: visual, auditory, somatosensory, perception, etc., and different species: monkeys, rats, humans, etc. Concentrating on the recording and analysis of the firing of single and multiple neurons and the analysis and recording of other integrative measures of network activity and network states such as local field potentials or current source densities is the basis of the introductory chapters. Provides a comprehensive and interdisciplinary approach. Describes topics of interest to a wide range of researchers. The book then moves forward with the description of the principles of neural coding for different functions and in different species and concludes with theoretical and modeling works describing how information processing functions are implemented. The text not only contains the most important experimental findings but gives an overview of the main methodological aspects for studying neural coding. In addition, the book describes alternative approaches based on simulations with neural networks and *in silico* modeling in this highly interdisciplinary topic. It can serve as an important reference to students and professionals. *Structure: From Physics To General Systems - Festschrift Volume In Honor Of E R Caianiello On His Seventieth Birthday (In 2 Volumes)* Maria Marinaro, Gaetano Scarpetta, 1993-02-23 This Festschrift volume in honour of Prof E R Caianiello contains invited papers of eminent scientists who have worked in the several areas to which Prof Caianiello has given seminal contributions: quantum field theory, foundations of quantum mechanics and maximal acceleration. Vol 1: neural nets, general systems theory and various topics of cybernetics. Vol 2: The wide range of topics covered shows the fruitfulness of a higher unifying perspective on seemingly diverse subjects. **The Human-Computer Interaction Handbook** Andrew Sears, Julie A.
