World Development Report 2021 World Bank, 2021-07-02 The unprecedented growth of data and its ubiquity in our daily lives signal that the digital revolution is transforming the world But much of the value of data remains untapped waiting to be realized Data collected for one particular purpose has the potential to generate economic value in applications far beyond those originally anticipated However many barriers stand in the way of the beneficial reuse of data ranging from misaligned incentives and incompatible data systems to a fundamental lack of trust The World Development Report 2021 Data for Better Lives will explore the tremendous potential of the changing data landscape to improve the lives of poor people but also to open backdoors that can harm individuals businesses and societies The first part of the report assesses how better use and reuse of data can enhance the design of public policies programs and service delivery as well as improve market efficiency and job creation through

private sector growth The second part of the report focuses on issues of governance law and policy that can help realize data's potential benefits while safeguarding against harmful outcomes By examining these issues the report aims to show how data can be leveraged to benefit the lives of poor people

Performance Enhancements in a Frequency Hopping GSM

Network Thomas Toftegaard Nielsen,Jeroen Wigard,2007-05-08 Due to the explosive global growth in the number of mobile subscribers as well as the growth predicted in the mobile data segment the need for improved spectrum efficiency on the radio interface becomes more and more important Frequency hopping FH is an effective method for improving the spectrum efficiency One of the advantages of FH is that it can be combined with other spectral efficiency improving features like power control handover and reuse partitioning Performance Enhancements in a Frequency Hopping GSM Network covers FH and some of the additional features in detail It begins with an in depth description of the basic concept of FH on link level as well as on system level Different methods have been used for analysis such as link level simulations network level simulations and classic tele traffic theory Special features of Performance Enhancements in a Frequency Hopping GSM Network Combines the practical experiences of operator and vendor with more theoretical research methods An in depth treatment of prevailing problems in GSM networks Presentation of a new method computer aided network design CAND which has been developed to analyse the complex network structures of a GSM network CAND provides the possibility for more realistic performance evaluations than conventional methods Provides GSM specific analysis of functionality improvements in power control discontinuous transmission and several handover algorithms Explanation of the quality and capacity gains of features like the combination of FH and reuse partitioning referred to as intelligent frequency hopping A frequency planning method for FH GSM networks is presented This method exploits the benefits from FH directly in the allocation process increasing the overall frequency plan
