Numerical Modelling and Simulation of Metal Processing Christof Sommitsch, 2021-08-16 This book deals with metal processing and its numerical modelling and simulation. In total 21 papers from different distinguished authors have been compiled in this area. Various processes are addressed including solidification, TIG welding, additive manufacturing, hot and cold rolling, deep drawing, pipe deformation and galvanizing. Material models are developed at different length scales from atomistic simulation to finite element analysis in order to describe the evolution and behavior of materials during thermal and thermomechanical treatment. Materials under consideration are carbon Q ductile iron and aluminum nickel based and titanium alloys. The developed models and simulations shall help to predict structure evolution, damage and service behavior of advanced materials.

Energy and Resource Efficiency in Aluminium Die Casting Tim Heinemann, 2015-07-25 This monograph provides a field proven approach to analyze industrial production with a cross company scope as well as regarding all hierarchical system levels of manufacturing enterprises. The book exemplifies this approach in the context of aluminum die casting and presents a set of measures which allow a 30 percent energy reduction along the value chain. The target audience primarily comprises researchers and experts in the field but the book may also be beneficial for graduate students.
