**Espaces 4e SE (Loose-Leaf)** Vista Higher Learning, Incorporated, 2018-03      *Riemannian Geometry in an Orthogonal Frame* Elie Cartan, Serge? Pavlovich Finikov, 2001 Elie Cartan's book *Geometry of Riemannian Manifolds* 1928 was one of the best introductions to his methods. It was based on lectures given by the author at the Sorbonne in the academic year 1925-26. A modernized and extensively augmented edition appeared in 1946 2nd printing 1951 and 3rd printing 1988. Cartan's lectures in 1926-27 were different; he introduced exterior forms at the very beginning and used extensively orthonormal frames throughout to investigate the geometry of Riemannian manifolds. In this course he solved a series of problems in Euclidean and non-Euclidean spaces as well as a series of variational problems on geodesics. The lectures were translated into Russian in the book *Riemannian Geometry in an Orthogonal Frame* 1960. This book has many innovations such as the notion of intrinsic normal differentiation and the Gaussian torsion of a submanifold in a Euclidean multidimensional space or in a space of constant curvature; an affine connection defined in a normal fiber bundle of a submanifold, etc. The only book of Elie Cartan that was not available in English; it has now been translated into English by Vladislav V. Goldberg, the editor of the Russian edition.      **Riemannian Geometry In An Orthogonal Frame**, 2001-12-10 Foreword by S. S. Chern. In 1926-27 Cartan gave a series of lectures in which he introduced exterior forms at the very beginning and used extensively orthogonal frames throughout to investigate the geometry of Riemannian manifolds. In this course he solved a series of problems in Euclidean and non-Euclidean spaces as well as a series of variational problems on geodesics. In 1960 Sergei P. Finikov translated from French into Russian his notes of these Cartan's lectures and published them as a book entitled *Riemannian Geometry in an Orthogonal Frame*. This book has many innovations such as the notion of intrinsic normal differentiation and the Gaussian torsion of a submanifold in a Euclidean multidimensional space or in a space of constant curvature; an affine connection defined in a normal fiber bundle of a submanifold, etc. It has now been translated into English by Vladislav V. Goldberg, currently Distinguished Professor of Mathematics at the New Jersey Institute of Technology, USA, who also edited the Russian edition.      **The Oxford Handbook of the French Language** Wendy Ayres-Bennett, Mairi McLaughlin, 2024-07-08. This volume provides the first comprehensive reference work in English on the French language in all its facets. It offers a wide-ranging approach to the rich, varied and exciting research across multiple subfields with seven broad thematic sections covering the structures of French, the history of French, axes of variation, French around the world, French in contact with other languages, second language acquisition, and French in literature, culture, arts, and the media. Each chapter presents the state of the art and directs readers to canonical studies and essential works while also exploring cutting-edge research and outlining future directions. The Oxford Handbook of the French Language serves both as a reference work for people who are curious to know more about the French language and as a starting point for those carrying out new research on the language and its many varieties. It will appeal to undergraduate and graduate students as well as established

scholars whether they are specialists in French linguistics or researchers in a related field looking to learn more about the language The diversity of frameworks approaches and scholars in the volume demonstrates above all the variety vitality and vibrancy of work on the French language today

**Basic Modern Theory of Linear Complex Analytic  $q$ -Difference Equations** Jacques Sauloy, 2024-11-06 The roots of the modern theories of differential and  $q$  difference equations go back in part to an article by George D Birkhoff published in 1913 dealing with the three sister theories of differential difference and  $q$  difference equations This book is about  $q$  difference equations and focuses on techniques inspired by differential equations in line with Birkhoff's work as revived over the last three decades It follows the approach of the Ramis school mixing algebraic and analytic methods While it uses some  $q$  calculus and is illustrated by  $q$  special functions these are not its main subjects After a gentle historical introduction with emphasis on mathematics and a thorough study of basic problems such as elementary  $q$  functions elementary  $q$  calculus and low order equations a detailed algebraic and analytic study of scalar equations is followed by the usual process of transforming them into systems and back again The structural algebraic and analytic properties of systems are then described using  $q$  difference modules Newton polygon filtration by the slopes The final chapters deal with Fuchsian and irregular equations and systems including their resolution classification Riemann Hilbert correspondence and Galois theory Nine appendices complete the book and aim to help the reader by providing some fundamental yet not universally taught facts There are 535 exercises of various styles and levels of difficulty The main prerequisites are general algebra and analysis as taught in the first three years of university The book will be of interest to expert and non expert researchers as well as graduate students in mathematics and physics

*The Handbook of Technology and Second Language Teaching and Learning* Carol A. Chapelle, Shannon Sauro, 2017-06-28 The Handbook of Technology and Second Language Teaching and Learning presents a comprehensive exploration of the impact of technology on the field of second language learning The rapidly evolving language technology interface has propelled dramatic changes in and increased opportunities for second language teaching and learning Its influence has been felt no less keenly in the approaches and methods of assessing learners language and researching language teaching and learning Contributions from a team of international scholars make up the Handbook consisting of four parts language teaching and learning through technology the technology pedagogy interface technology for L2 assessment and research and development of technology for language learning It considers how technology assists in all areas of language development the emergence of pedagogy at the intersection of language and technology technology in language assessment and major research issues in research and development of technologies for language learning It covers all aspects of language including grammar vocabulary reading writing listening speaking pragmatics and intercultural learning as well as new pedagogical and assessment approaches and new ways of conceiving and conducting research and development The Handbook of Technology and Second Language Teaching and Learning demonstrates the extensive multifaceted implications of technology for language teachers learners
