Puente, Robert J. McCaffrey, 2013-11-11 The growth of clinical neuropsychology has been unprecedented This growth has been oriented more toward the provision of than toward the foundation for services Thus while a greater number of psychologists are performing a greater number of neuropsychological procedures there seems to us an uneven parallel growth between these services and the empirical foundations for them It should come to no one s surprise that increasingly aggressive attacks on the field have been leveled Despite these attacks clinical neuropsychology continues to enjoy exceptional growth within psychology and acceptance by other health practitioners insurance companies legislators judges juries and above all consumers of our services Growth without self reflection is a dangerous enterprise as is growth without directions We find it disconcerting that existing and limited self analysis has assumed that neuropsychological dysfunction is immune to the same variables that affect psychological dysfunction Some attention has been paid to the most obvious ones such as age but all others have been ignored and or misunderstood This neglect has spawned a body of knowledge replete with questionable data and unfounded conclusions Hence it is surprising that clinical neuropsychologists consider themselves to be more scientifically sound than their regular clinical counterparts **Handbook of Toxicogenomics** Jürgen Borlak, 2006-03-06 Toxicogenomics is a new dynamic and very promising field that can help optimize toxicity analyses and streamline research into active substances It is of interest not only for basic research and development but also from a legal and ethical perspective Here experts from all the fields

mentioned will find solid information provided by an international team of experienced authors With its approach as an interdisciplinary overview it will prove particularly useful for all those needing to develop appropriate research strategies The authors work for major research institutions such as the Fraunhofer Institute of Toxicology and Experimental Medicine Germany the German Cancer Research Center the National Institute of Environmental Health Science USA the National Institute of Health Science Japan or for companies like Affymetrix Altana Pharma Bayer Boehringer Ingelheim Bruker Merck Nimblegen Novartis and Syngenta Coverage ranges from the technology platforms applied including DNA arrays or proteomics via the bioinformatics tools required right up to applications of toxicogenomics presented in numerous case studies while also including an overview of national programs and initiatives as well as regulatory perspectives Walter Rosenthal Director of the Research Institute for Molecular Pharmacology in Berlin praises the book thus I would like to congratulate the publishers of this handbook one that deals with a extremely hot topic They have succeeded in gaining as authors leading representatives from this field The Handbook impressively shows how modern genomic research is leading to rapid advances and new insights within toxicology
