Overcoming Barriers to Deployment of Plug-in Electric Vehicles National Research Council,Transportation Research

Board, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on Overcoming Barriers to Electric-Vehicle Deployment, 2015-06-26 In the past few years interest in plug in electric vehicles PEVs has grown Advances in battery and other technologies new federal standards for carbon dioxide emissions and fuel economy state zero emission vehicle requirements and the current administration's goal of putting millions of alternative fuel vehicles on the road have all highlighted PEVs as a transportation alternative Consumers are also beginning to recognize the advantages of PEVs over conventional vehicles such as lower operating costs smoother operation and better acceleration the ability to fuel up at home and zero tailpipe emissions when the vehicle operates solely on its battery There are however barriers to PEV deployment including the vehicle cost the short all electric driving range the long battery charging time uncertainties about battery life the few choices of vehicle models and the need for a charging infrastructure to support PEVs What should industry do to improve the performance of PEVs and make them more attractive to consumers At the request of Congress Overcoming Barriers to Deployment of Plug in Electric Vehicles identifies barriers to the introduction of electric vehicles and recommends ways to mitigate these barriers This report examines the characteristics and capabilities of electric vehicle technologies such as cost performance range safety and durability and assesses how these factors might create barriers to widespread deployment Overcoming Barriers to Deployment of Plug in Electric Vehicles provides an overview of the current status of PEVs and makes recommendations to spur the industry and increase the attractiveness of this promising technology for consumers Through consideration of consumer behaviors tax incentives business models incentive programs and infrastructure needs this book studies the state of the industry and makes recommendations to further its development and acceptance

Linear and Nonlinear System Modeling Tamal Roy, Suman Lata Tripathi, Souvik Ganguli, 2024-09-06

Written and edited by a team of experts in the field this exciting new volume presents the cutting edge techniques latest trends and state of the art practical applications in linear and nonlinear system modeling Mathematical modeling of control systems is essentially extracting the essence of practical problems into systematic mathematical language In system modeling mathematical expression deals with modeling and its applications It is characterized that how a modeling competency can be categorized and its activity can contribute to building up these competencies Mathematical modeling of a practical system is an attractive field of research and an advanced subject with a variety of applications The main objective of mathematical modeling is to predict the behavior of the system under different operating conditions and to design and implement efficient control strategies to achieve the desired performance A considerable effort has been directed to the development of models which must be understandable and easy to analyze It is a very difficult task to develop mathematical modeling of complicated practical systems considering all its possible high level non linearity and cross couple dynamics Although mathematical modeling of nonlinear systems sounds quite interesting it is difficult to formulate the general solution to analyze and synthesize nonlinear dynamical systems Most of the natural processes are nonlinear having very high

computational complexity of several numerical issues It is impossible to create any general solution or individual procedure to develop exact modeling of a non linear system which is often improper and too complex for engineering practices Therefore some series of approximation procedures are used in order to get some necessary knowledge about the nonlinear system dynamics There are several complicated mathematical approaches for solving these types of problems such as functional analysis differential geometry or the theory of nonlinear differential equations Energy Research Abstracts,1979
