

Lesson 2 – Refraction and Total Internal Reflection

Refraction

- Refraction is the **bending of light** as it travels at an angle from one medium to another
- A **refracted ray** occurs when light transmits into a transparent material
- When light travels from a **less optically dense medium into a more optically dense** medium (i.e. air into glass), the refracted ray bends **toward the normal**
- If light travels through a substance and back into the original substance (i.e. air to glass to air), the refracted ray emerging from the glass will be **parallel to the incident ray**

n = index of refraction

can bend in a
medium (ratio)

International Communities of Invention and Innovation Arthur Tatnall, Christopher Leslie, 2016-11-30 This book contains revised selected papers presented at the IFIP WG 9.7 International Conference on the History of Computing HC 2016 held in Brooklyn NY USA in May 2016. The 13 full papers included in this volume were carefully reviewed and selected from numerous submissions. The papers cover a wide range of topics related to the history of computing and focus on the history of pre-existing relationships and communities that led to triumphs and dead ends in the history of computing. This broad perspective helps to tell a more accurate story of important developments like the Internet and provide a better understanding of how to sponsor future invention and innovation. They reflect on histories that foreground the international community along four broad themes: invention, policy, infrastructure, and social history. Clipped Wings Deborah

Ancell, 2016-10-04 Within the developed world, airlines have responded to the advice of advocates for corporate social and environmental responsibility (CSER) to use the intertwined dimensions of economics, society, and environment to guide their business activities. However, disingenuously, the advocates and regulators frequently pay insufficient attention to the economics, which are critical to airlines' sustainability and profits. This omission pushes airlines into the unprofitable domain of CSERplus. The author identifies alleged market inefficiencies and failures, examines CSERplus impacts on international competition, and assesses the unintended consequences of the regulations. She also provides innovative ideas for future proofing airlines. Clipped Wings is a treatise for business professionals featuring academic research as well as industry anecdotes. It is written for airlines including their owners, employees, passengers, and suppliers; airports; trade associations; policy makers; educators; students; consultants; CSERplus specialists; and anyone who is concerned about the future of competitive airlines. **The Anthropocene as a Geological Time Unit** Jan Zalasiewicz, Colin N. Waters, Mark

Williams, Colin P. Summerhayes, 2019-03-07 Reviews the evidence underpinning the Anthropocene as a geological epoch written by the Anthropocene Working Group investigating it. The book discusses ongoing changes to the Earth system within the context of deep geological time, allowing a comparison between the global transition taking place today with major transitions in Earth history. **A Hardware Track-Trigger for CMS** Thomas Owen James, 2019-10-28 The work described

in this PhD thesis is a study of a real implementation of a track finder system which could provide reconstructed high transverse momentum tracks to the first level trigger of the High Luminosity LHC upgrade of the CMS experiment. This is vital for the future success of CMS since otherwise it will be impossible to achieve the trigger selectivity needed to contain the very high event rates. The unique and extremely challenging requirement of the system is to utilise the enormous volume of tracker data within a few microseconds to arrive at a trigger decision. The track finder demonstrator described proved unequivocally using existing hardware that a real time track finder could be built using present generation FPGA based technology which would meet the latency and performance requirements of the future tracker. This means that more

advanced hardware customised for the new CMS tracker should be even more capable and will deliver very significant gains for the future physics returns from the LHC

Ice-Houses Alireza Dehghani-Sanij, Mehdi N. Bahadori, 2021-05-06 Ice Houses Energy Architecture and Sustainability presents new and novel technologies and approaches surrounding daily and seasonal ice storage along with discussions on passive cooling and natural technologies using different methods including heat pumps The book covers different aspects of ice houses and cold energy production storage and utilization By addressing various issues connected to the technology and structure of traditional ice houses and natural and artificial ice making this references looks at new technological approaches for the reduction of electrical energy consumption in buildings Users will find this to be a comprehensive overview of ice house storage that includes worked examples and global case studies It is an essential resource for researchers and engineers looking to advance their understanding of this method of thermal storage Includes worked examples which calculate and determine the amounts of different parameters to help better understand the problem solving process Provides a comprehensive literature review on the history and architecture of ice houses along with different ice production and storage methods Contains recent developments related to cold energy production and storage through ice making to reduce electricity demand
