Navneet Singh, Here are some common Spring Boot interview questions along with their answers

What is Spring Boot? Spring Boot is an open source Java based framework used to create stand alone production grade Spring based applications with minimal setup and configuration

What are the key features of Spring Boot? Some key features include Auto configuration It automatically configures the Spring application based on dependencies present in the class path Starter dependencies Pre configured dependencies to simplify dependency management Embedded servers It provides support for embedding servlet containers like Tomcat Jetty and Undertow Production ready features It includes features like metrics health checks and externalized configuration

Explain the difference between Spring and Spring Boot Spring is a comprehensive framework for building enterprise level Java applications while Spring Boot is an extension of the Spring framework that simplifies the process of building and deploying Spring applications by providing defaults for configuration and eliminating boilerplate code

How does Spring Boot simplify the development process? Spring Boot simplifies development by providing defaults for configuration reducing the amount of boilerplate code and offering a range of pre built features and plugins

What is Spring Boot Starter? Spring Boot Starter is a set of convenient dependency descriptors that you can include in your application You can add starters to your application s class path and Spring Boot will automatically configure the appropriate dependencies based on the libraries present

How does Spring Boot handle configuration? Spring Boot uses convention over configuration and auto configuration to minimize the need for explicit configuration It provides sensible defaults for configuration and automatically configures components based on the classpath and application properties

What is Spring Boot Actuator? Spring Boot Actuator is a set of production ready features that help you monitor and manage your application It includes endpoints for health checks metrics info environment details and more

Explain the difference between Component Service Repository and Controller annotations in Spring Boot Component is a generic stereotype annotation for any Spring managed component Service is used to mark a class as a service component in the business layer Repository is used to mark a class as a data access component in the persistence layer Controller is used to mark a class as a controller component in the presentation layer typically for handling HTTP requests

How does Spring Boot support testing? Spring Boot provides support for unit testing integration testing and end to end testing using frameworks like JUnit Mockito and Spring Boot Test It includes features like `SpringBootTest` annotation for loading Spring application contexts `MockBean` annotation for mocking beans and `TestRestTemplate` for testing RESTful endpoints

What is Spring Boot CLI? Spring Boot CLI Command Line Interface is a command line tool that allows you to quickly develop Spring Boot applications using Groovy scripts It provides features like auto restart dependency management and more directly from the command line

These questions cover some of the fundamental aspects of Spring Boot that are commonly asked in interviews Make sure to understand these concepts thoroughly and be prepared to provide examples or elaborate on them during interviews
