systems intelligent agents speech and image understanding and decision making in complex environments The domain constituted by the intelligent systems is now too large to be covered in a single volume Consequently the Editors considered a balance between several selected sub fields to insure the unity of the volume yet allowing a large enough horizon and a consistent understanding of the entire field including real life applications The volume represents a comprehensive coverage of the field including fundamental aspects software sensors and hardware related issues Moreover the contributors to this volume offer beyond a systematic overview of intelligent interfaces and systems deep practical knowledge in building and using intelligent systems in various applications A special emphasis is on specific aspects and requirements in applications In addition the second Editor proposes two chapters addressing the management of projects dealing with intelligent systems
