Cell Encapsulation Technology and Therapeutics Willem_M. Kühtreiber,Robert P. Lanza,William L. Chick,2013-12-01 The concept of using encapsulation for the immunoprotection of transplanted cells was introduced for the first time in the 1960s Microencapsulated cells might be protected from destruction and from participation in immunological processes while the enclosing membrane would be permeable to small molecules of specific cellular product which could then enter the general extracellular compartment of the recipient For instance encapsulated endocrine cells might survive and maintain an effective supply of hormone Chang Ph D Thesis McGill University 1965 Chang et al Can J Physiol Pharmacol44 115 128 1966 We asked Connaught Laboratories Ltd in Toronto to put this concept into practice In 1980 Lim and Sun from Connaught Laboratories reported on the successful implantation of poly I lysine alginate encapsulated rat islets into a foreign host Lim and Sun Science 210 908 909 1980 Now many groups around the world are making tremendous progress in the encapsulation of a multitude of cell types Kiihtreiber Lanza and Chick have invited many cell encapsulation groups from around the world to contribute to this book The result is a very useful reference book in this rapidly growing area With so many excellent authors describing in detail the different areas of cell encapsulation my role here will be to briefly discuss a few points
