Cyclone Nargis, Myanmar John Espie Leake, 2013-04-20 This book uses a review of recovery efforts following the Nargis cyclone in Myanmar in 2008 to build a case for taking a risk based approach to managing our natural resource base It is argued that while natural resource disasters like soil loss and climate change are slow onset disasters they are often much more significant than events like Nargis and are significant risk factors themselves in the scale of sudden onset disasters like Cyclone Nargis The book concludes that building resilience for slow or rapid onset disasters requires the same holistic approach to involve the concerned community if it is to be successful It is suggested that an approach to monitoring that looks for the key risk points for these communities whether they be bio physical economic or social will be a more useful approach to planning action for them than the systems in common use based as they are on monitoring for bureaucratic paymasters

Herman Pontzer PhD, 2022-04-19 One of the foremost researchers in human metabolism reveals surprising new science behind food and exercise We burn 2 000 calories a day And if we exercise and cut carbs we ll lose more weight Right Wrong In this paradigm shifting book Herman Pontzer reveals for the first time how human metabolism really works so that we can finally manage our weight and improve our health Pontzer s groundbreaking studies with hunter gatherer tribes show how exercise doesn t increase our metabolism Instead we burn calories within a very narrow range nearly 3 000 calories per day no matter our activity level This was a brilliant evolutionary strategy to survive in times of famine Now it seems to doom us to obesity The good news is we can lose weight but we need to cut calories Refuting such weight loss hype as paleo keto anti gluten anti grain and even vegan Pontzer discusses how all diets succeed or fail For shedding pounds a calorie is a calorie At the same time we must exercise to keep our body systems and signals functioning optimally even if it won t make us thinner Hunter gatherers like the Hadza move about five hours a day and remain remarkably healthy into old age But elite athletes can push the body too far burning calories faster than their bodies can take them in It may be that the most spectacular athletic feats are the result not just of great training but of an astonishingly efficient digestive system Revealing irreverent and always entertaining Pontzer has written a book that will change how you eat move and live **Applied Strength of Materials**
