**Tackling Marine Debris in the 21st Century** Committee on the Effectiveness of International and National Measures to Prevent and Reduce Marine Debris and Its Impacts, Ocean Studies Board, Division on Earth and Life Studies, National Research Council, 2008-12-31 Marine debris from ships and other ocean based sources including trash and lost fishing gear contributes to the spoiling of beaches fouling of surface waters and the seafloor and harm to marine animals among other effects Unfortunately international conventions and domestic laws intended to control marine debris have not been successful in part because the

laws as written provide little incentive to change behavior This book identifies ways to reduce waste improve waste disposal at ports and strengthen the regulatory framework toward a goal of zero waste discharge into the marine environment Progress will depend on a commitment to sustained funding and appropriate institutional support The Interagency Marine Debris Coordinating Committee should through planning and prioritization target research to understand the sources fates and impacts of marine debris It should support the establishment of scalable and statistically rigorous protocols that allow monitoring at a variety of temporal and spatial scales These protocols should contain evaluative metrics that allow assessment of progress in marine debris mitigation The United States through leadership in the international arena should provide technical assistance and support for the establishment of additional monitoring and research programs worldwide

Brown, 2023-08-28 This first book in a three volume work on Sea Bed Energy and Minerals The International Legal Regime is concerned with the law governing the exploitation of energy and mineral resources in two quite different sub marine areas Volume 1 deals with the areas within the limits of national jurisdiction that is all of the submarine areas extending from the coast to the seaward limit of the continental shelf As its subtitle indicates this volume is predominantly concerned with The Continental Shelf Although the United Nations Convention on the Law of the Sea has still not entered into force and indeed may not do so for many years for some of the major maritime powers its adoption in 1982 did nonetheless usher in a period of relative stability in the rules governing the areas within national jurisdiction including in particular the continental shelf However being the creatures of compromise some of its rules are undeniably vague and it has been left to State practice and international courts and tribunals to develop these rules further especially those relating to the delimitation of the continental shelf between neighbouring States Volume 1 provides an analysis of the rules of conventional and customary law in the light of this practice Volume 2 on Sea Bed Mining deals with the area beyond the limits of national jurisdiction that is the submarine area lying seaward of the outer limit of the continental shelf Volume 3 which will be published at the same time as Volume 2 will provide Documents Tables and Bibliography relating to the subject matter of the first two volumes     The Maritime Engineering Reference Book Anthony F. straits the distinction between existing treaty based regimes and the general regime and the special characteristics of straits that separate them from similar arms of the sea in terms of law In answering these questions the author takes us back to the first regime for international straits in 1949 through to the practices of the present day This will be an invaluable text for all international lawyers particularly those specializing in the law of sea

**International Law Obligations on Climate Change Mitigation** Benoit Mayer, 2022-07-11 Recent years have witnessed exciting developments in international negotiations litigation and scholarship about climate change but doctrinal research in the field remains in its infancy In particular little is known about how fast states are required to limit and reduce their greenhouse gas emissions The first part of the book identifies the relevant obligations through an analysis of treaties custom and other sources of international law Beyond express quantified commitments contained for instance in nationally determined contributions the book sheds light on the existence of general obligations of due diligence While these general obligations are difficult to interpret they are often more demanding The second part explores how these general obligations can be applied objectively for instance by a court in concrete cases Instead of an improbable judicial assessment of a state's requisite level of mitigation action the book shows the possibility of assessing a state's conduct based on the measures that general mitigation obligations entail These measures relate to corollary duties of cooperation vigilance and consistency This book presents a first comprehensive doctrinal study of states obligations on climate change mitigation It shows that such obligations arise not only from climate treaties but also from customary international law unilateral declarations and possibly human rights treaties It also explores the interactions between these multiple obligations

**Environmental Regulation of Oil and Gas** Zhiguo Gao, Chih-Kuo Kao, 1998-09-10 This book contains in depth articles written by scholars international lawyers and practitioners from around the world It deals with the environmental aspect of the hydrocarbon cycle in general and oil and gas exploration and production in particular Its main thrust is management of environmental legal risks and issues in upstream operations

**Carbon-Free Shipping and Shipping Carbon** Stephen Girvin, Vibe Ulfbeck, 2024-08-22 This book explores the private law implementation of the new international and EU regulatory framework targeting decarbonisation in the shipping industry Compared with other sectors the shipping industry has traditionally been labelled a slow mover concerning the sustainability agenda However new regulatory measures on carbon reduction both internationally and in the EU require fundamentally new developments in the industry This book focuses on the goal of carbon reduction from a private law perspective and considers how the new regulatory framework can be implemented in the shipping industry This book studies existing contractual provisions in charterparties and bills of lading alongside new contractual model clauses designed to

facilitate carbon reduction It considers how the new clauses should be interpreted whether they will transform traditional shipping contracts into more collaborative contracts and how they will interact with other clauses in the contract and with other contracts in the supply chain The contractual analysis is considered in context reflecting on enforcement issues such as Port State Control PSC the Poseidon Principles and climate change litigation The book also analyses the related topic of shipping contracts for carbon storage as a necessary means of meeting carbon reduction targets The book is intended to pave the way for understanding how core shipping contracts can work in this new context and the extent to which the new types of clauses will profoundly transform contracts It presents contributions by experienced and younger academics and practitioners from Asian European and Scandinavian legal systems Officer in charge of an engineering watch
