<u>Caught in the Act</u> Cyril Julie,Lorna Holtman,Charles R. Smith,2019-12-11 The research reported in Caught in the Act draws together the insights gained from a continuous professional development initiative for high school mathematics teachers teaching in low socio economic status and socially challenged environments in South Africa The chapters show the possibilities for enhancing achievement in school mathematics if a strength based approach is adopted to develop teaching with teachers and when their concerns are taken seriously The book demonstrates that the ecological relevance fitness for the context in which teachers are teaching of the goods developed and distributed by initiatives should be a major consideration to offer hope for sustainable implementation to improve school mathematics education The book is of interest to mathematics teachers school leaders mathematics curriculum advisors policy makers and researchers   <u>Parameters</u> ,2017   **Privacy and Identity Management. Putnam,2014-09-29 The author develops a homology theory for Smale spaces which include the basics sets for an Axiom A diffeomorphism It is based on two ingredients The first is an improved version of Bowen s result that every such system is the image of a shift of finite type under a finite to one factor map The second is Krieger s dimension group invariant for shifts of finite type He proves a Lefschetz formula which relates the number of periodic points of the system for a given period to trace data from the action of the dynamics on the homology groups The existence of such a theory was proposed by Bowen in the 1970s   <u>Breaking Teleprinter Ciphers at Bletchley Park</u> James A. Reeds,Whitfield Diffie,J. V. Field,2015-05-14 This book is an edition of the General Report on Tunny with commentary that clarifies the often difficult language of the GRT and fitting it into a variety of contexts arising out of several separate but intersecting story lines some only implicit in the GRT Explores the likely roots of the ideas entering into the Tunny cryptanalysis Includes examples of original worksheets and printouts of the Tunny breaking process in action Presents additional commentary biographies glossaries essays and bibliographies   **Numerical Approximations of Stochastic Differential Equations with Non-Globally Lipschitz Continuous Coefficients** Martin Hutzenthaler,Arnulf Jentzen,2015-06-26 Many stochastic differential equations SDEs in the literature have a superlinearly growing nonlinearity in their drift or diffusion coefficient Unfortunately moments of the computationally efficient Euler Maruyama approximation method diverge for these SDEs in finite time This article develops a general theory based on rare events for studying integrability properties such as moment bounds for discrete time stochastic processes Using this approach the authors establish moment bounds for fully and partially drift implicit Euler methods and for a class of new explicit approximation methods which require only a few more arithmetical operations than the Euler Maruyama method These moment bounds are then used to prove strong convergence of the proposed schemes Finally the authors illustrate their results for several SDEs from finance physics biology and chemistry   *Monthly Catalogue, United States Public Documents* ,1965   *Hod Mice and the Mouse Set Conjecture* Grigor Sargsyan,2015-06-26 The author develops the theory of Hod mice below ADR is regular He uses this theory to show that HOD of the minimal model of ADR is regular satisfies GCH Moreover he shows that the Mouse Set Conjecture is true in the minimal model of ADR is regular   **On the Differential Structure of Metric Measure Spaces and Applications** Nicola Gigli,2015-06-26 The main goals of this paper are i To develop an abstract differential calculus on metric measure spaces by investigating the duality relations between differentials and gradients of Sobolev functions This will be achieved without calling into play any sort of analysis in charts our assumptions being the metric space is complete and separable and the measure is Radon and non negative ii To employ

these notions of calculus to provide via integration by parts a general definition of distributional Laplacian thus giving a meaning to an expression like where is a function and is a measure iii To show that on spaces with Ricci curvature bounded from below and dimension bounded from above the Laplacian of the distance function is always a measure and that this measure has the standard sharp comparison properties This result requires an additional assumption on the space which reduces to strict convexity of the norm in the case of smooth Finsler structures and is always satisfied on spaces with linear Laplacian a situation which is analyzed in detail <u>Ethnomathematics and its Diverse Approaches for Mathematics Education</u> Milton Rosa,Lawrence Shirley,Maria Elena Gavarrete,Wilfredo V. Alangui,2017-07-25 This book addresses numerous issues related to ethnomathematics and diverse approaches to it in the context of mathematics education To help readers better understand the development of ethnomathematics it discusses its objectives and assumptions with regard to promoting an ethics of respect solidarity and cooperation across and for all cultures In turn the book addresses a range of aspects including pedagogical action culturally relevant pedagogy innovative approaches to ethnomathematics and the role of ethnomathematics in mathematics education Ethnomathematics offers educators a valuable framework for transforming mathematics so that it can more actively contribute to realizing the dream of a just and humane society As such its primary goal is to forge mathematics into a powerful tool to help people create a society characterized by dignity for all and in which iniquity arrogance violence and bigotry have no place **Geometric Complexity Theory IV: Nonstandard Quantum Group for the Kronecker Problem** Jonah Blasiak,Ketan D. Mulmuley,Milind Sohoni,2015-04-09 The Kronecker coefficient is the multiplicity of the irreducible in the restriction of the irreducible via the natural map where are vector spaces and A fundamental open problem in algebraic combinatorics is to find a positive combinatorial formula for these coefficients The authors construct two quantum objects for this problem which they call the nonstandard quantum group and nonstandard Hecke algebra They show that the nonstandard quantum group has a compact real form and its representations are completely reducible that the nonstandard Hecke algebra is semisimple and that they satisfy an analog of quantum Schur Weyl duality **Learning Analytics in Higher Education** John Zilvinskis,Victor Borden,2017-09-28 Gain an overview of learning analytics technologies in higher education including broad considerations and the barriers to introducing them This volume features the work of practitioners who led some of the most notable implementations like the Open Learning Initiative now at Stanford University faculty led projects at the University of Michigan including ECoach and SLAM the University of Maryland Baltimore Countys Check My Activity and Indiana Universitys FLAGS early warning system and e course advising initiatives Readers will glean from these experiences as well as from a national project in Australia on innovative approaches for enhancing student experience an informed description of the role of feedback within these technologies and a thorough discussion of ethical and social justice issues related to the use of learning analytics and why higher education institutions should approach such initiatives cautiously intentionally and collaboratively This is the 179th
