Engineering the User Interface Miguel Redondo, Crescencio Bravo, Manuel Ortega, 2008-12-10 Digital Divide DD is a term that defines the division between people who communicate with respect to the access to the new Information and Communication Technologies ICTs. Nowadays it is essential to have technological skills to work in a variety of jobs i.e. administration, education, etc. Moreover, ICTs have become ubiquitous and they affect almost every aspect of our daily life. The way in which people face the task of using ICTs varies depending on a plethora of variables. The most analysed ones are the technological literacy and the educational level. These are two very important factors that strongly affect the success of the individuals in accessing ICTs. Unfortunately, these are not the only variables to consider. Some people suffer from mental and physical disabilities that are real impediments to access ICTs and they must be studied in detail. How can we help disabled people to access ICTs? Can public telecentres deal with this task? Can the ICTs be used to improve the accessibility of disabled people? Which projects aim to reduce the digital divide? Are they addressed to disabled people? These are some of the questions that we will try to answer at least partially in this chapter. We believe that governments must invest to avert the DD but they are not the only actors involved in this scenario.
