Digital Imaging for Cultural Heritage Preservation Filippo Stanco, Sebastiano Battiato, Giovanni Gallo, 2017-12-19

This edition presents the most prominent topics and applications of digital image processing analysis and computer graphics in the field of cultural heritage preservation. The text assumes prior knowledge of digital image processing and computer graphics fundamentals. Each chapter contains a table of contents, illustrations, and figures that elucidate the presented concepts in detail, as well as a chapter summary and a bibliography for further reading. Well-known experts cover a wide range of topics and related applications, including spectral imaging, automated restoration, computational reconstruction, digital reproduction, and 3D models.

Progress and New Trends in 3D Geoinformation Sciences Jacynthe

Pouliot, Sylvie Daniel, Frédéric Hubert, Alborz Zamyadi, 2012-10-23. The integration of the 3rd dimension in the production of spatial representation is largely recognized as a valuable approach to comprehend our reality that is 3D. During the last decade, developments in 3D Geoinformation (GI) systems have made substantial progress. We are about to have a more complete spatial model and understanding of our planet in different scales. Hence, various communities and cities offer 3D landscape and 3D city models as a valuable source and instrument for sustainable management of rural and urban resources. Also, municipal utilities, real estate companies, and others benefit from recent developments related to 3D applications. In order to present recent developments and to discuss future trends, academics and practitioners met at the 7th International Workshop on 3D Geoinformation. This book comprises a selection of evaluated high-quality papers that were presented at this workshop in May 2012. The topics focus explicitly on the latest achievements, methods, algorithms, models, and systems with respect to 3D Geoinformation requirements. The book is aimed at decision makers and experts, as well as students interested in the 3D component of geographical information science, including GI engineers, computer scientists, photogrammetrists, land surveyors, urban planners, and mapping specialists.

Smart Environment for Smart Cities T.M. Vinod Kumar, 2019-04-04

This book discusses the design and practice of environmental resources management for smart cities. Presenting numerous city case studies, it focuses on one specific environmental resource in each city. Environmental resources are commonly owned properties that require active inputs from the government and the people, and in any smart city, their management calls for a synchronous combination of e-democracy, e-governance, and IOT (Internet of Things) systems in a 24/7 framework. Smart environmental resources management uses information and communication technologies, the Internet of Things, internet of governance, e-governance, and internet of people, e-democracy, along with conventional resource management tools to achieve coordinated, effective, and efficient management, development, and conservation that equitably improves ecological and economic welfare without compromising the sustainability of development, ecosystems, and stakeholders.
