Advances in CAD/CAM/CAE Technologies Panagiotis Kyratsis, Konstantinos G. Kakoulis, Angelos P.

Markopoulos, 2020-05-27 CAD CAM CAE technologies find more and more applications in today's industries e.g. in the automotive aerospace and naval sectors. These technologies increase the productivity of engineers and researchers to a great extent while at the same time allowing their research activities to achieve higher levels of performance. A number of difficult to perform design and manufacturing processes can be simulated using more methodologies available i.e. experimental work combined with statistical tools regression analysis analysis of variance Taguchi methodology deep learning finite element analysis applied early enough at the design cycle CAD based tools for design optimizations CAM based tools for machining optimizations Finite Element Simulation of Residual Stresses from Welding and High Frequency Hammer Peening

Gkatzogiannis, Stefanos, 2022-06-30 Research goal of the present monograph is the establishment of an efficient engineering approach which will include straightforward but accurate simulation models in order to estimate the residual stress fields of welded joints introduced during welding and their post weld treatment with High Frequency Hammer Peening. The present subject lies on the intersection of structural engineering material science and computational mechanics **Trends in**

Brebbia, 2011 Contact mechanics and surface effects as well as their interaction are important in modern engineering. The life and performance of structural components is affected by surface conditions such as wear corrosion and high cycle fatigue. Surface treatments that address contact conditions can reduce costs by extending the life of components. These are the subjects of a biennial conference first held in 1993 the papers from the latest of which are collected in this volume. The book discusses Computer simulation Surface modification Surface treatments Surface problems in contact mechanics Contact mechanics Applications and case studies Indentation and hardness Thick and thin coatings Corrosion problems Nano characterisation Test methodology Multiscale experiments and modelling and Fracture fatigue and mechanics
