Landscape Planning at the Local Level Luigi La Riccia, 2017-06-01 The book showing virtuous examples of urban planning in Italy and Europe exposes certain doubts and open questions what is the new role of urban planning What actions rules are now achievable for the protection planning and management of local scale landscapes The overall reflections gathered in the book contribute to suggest innovative visions about landscape planning at local scale seen as first steps towards a more functional change of perspective New landscapes are the result of local planning practices that no longer seem able to understand the current society through urban design Public space and new urban centralities interact with the increasingly complex functions of social life and mark the distance from territorial values relying less and less on physical relationships economic and functional and increasingly on symbolic and intangible relationships as cultural identity Landscape is essential for the sustainable future of the urban and rural territory the landscape quality is a factor of economic competitiveness and acts also as a factor of social cohesion and integration

Mereology and the Sciences Claudio Calosi, Pierluigi Graziani, 2014-06-02 This volume is the first systematic and thorough attempt to investigate the relation and the possible applications of mereology to contemporary science It gathers contributions from leading scholars in the field and covers a wide range of scientific theories and practices such as physics mathematics chemistry biology computer science and engineering Throughout the volume a variety of foundational issues are investigated both from the formal and the empirical point of view The first section looks at the topic as it applies to physics The section addresses questions of persistence and composition within quantum and relativistic physics and concludes by scrutinizing the possibility to capture continuity of motion as described by our best

physical theories within gunky space times The second part tackles mathematics and shows how to provide a foundation for point free geometry of space switching to fuzzy logic The relation between mereological sums and set theoretic suprema is investigated and issues about different mereological perspectives such as classical and natural Mereology are thoroughly discussed The third section in the volume looks at natural science Several questions from biology medicine and chemistry are investigated From the perspective of biology there is an attempt to provide axioms for inferring statements about part hood between two biological entities from statements about their spatial relation From the perspective of chemistry it is argued that classical mereological frameworks are not adequate to capture the practices of chemistry in that they consider neither temporal nor modal parameters The final part introduces computer science and engineering A new formal mereological framework in which an indeterminate relation of part hood is taken as a primitive notion is constructed and then applied to a wide variety of disciplines from robotics to knowledge engineering A formal framework for discrete mereotopology and its applications is developed and finally the importance of mereology for the relatively new science of domain engineering is also discussed

Monmonier,1987

When the University of Chicago Press launched the landmark History of Cartography series nearly thirty years ago founding editors J B Harley and David Woodward hoped to create a new basis for map history They did not however anticipate the larger renaissance in map studies that the series would inspire But as the renown of the series and the comprehensiveness and acuity of the present volume demonstrate the history of cartography has proven to be unexpectedly fertile ground

Cartography in the European Renaissance treats the period from 1450 to 1650 long considered the most important in the history of European mapping This period witnessed a flowering in the production of maps comparable to that in the fields of literature and fine arts Scientific advances appropriations of classical mapping techniques burgeoning trade routes all such massive changes drove an explosion in the making and using of maps While this volume presents detailed histories of mapping in such well documented regions as Italy and Spain it also breaks significant new ground by treating Renaissance Europe in its most expansive geographical sense giving careful attention to often neglected regions like Scandinavia East Central Europe and Russia and by providing innovative interpretive essays on the technological scientific cultural and social aspects of cartography Lavishly illustrated with more than a thousand maps many in color the two volumes of *Cartography in the European Renaissance* will be the unsurpassable standard in its field both defining it and propelling it forward *Rural Development Abstracts* ,2010 Thomas Register of American Manufacturers and Thomas Register Catalog File ,1997 Vols for 1970 71 includes manufacturers catalogs **Diamond** Tijl Vanneste,2022-08-01 Diamond Jack Ogden CIBJO Diamond Michael Bycroft
