Recovering Caribbean Nature James A. Kushlan,Kirsten Hines,2024-10-29 The Caribbean is a global biodiversity hotspot half its resident bird species are found nowhere else yet a quarter are threatened with extinction Nearly all its native amphibians and reptiles and thousands of plants also are endemic Yet less than 1% of the landscape can be considered natural and apart from reserves most land is privately owned Despite the challenges of such habitat fragmentation the Caribbean s distinctive fauna and flora can be preserved through planning and managing a connected network of sustainable naturalistic landscapes reserves parks and private gardens This book uniquely provides both a theoretical background and practical applications to restoring nature within the tropical Caribbean Packed with beautiful color photographs it offers unifying principles that can be applied across the tropics and synthesizes information on the Caribbean s environmental uniqueness and globally significant biodiversity It also provides explicit guidance on establishing sustainable and more naturalistic landscapes from large public lands to private yards and gardens The book is essential reading for academics and researchers studying the Caribbean environment resource management professionals and scientists and educatos from nongovernmental organizations who provide programs and advocacy for conservation and regional sustainability Moreover it highlights the importance of private lands and gardens where the greatest gains can be made and so offers a handbook for knowledgeable private landowners and their professional advisors

Team Sports Training Javier Mallo, 2020-03-10 Team Sports Training The Complexity Model presents a novel approach to team sports training examining football soccer rugby field hockey basketball handball and futsal through the paradigm of complexity Under a traditional prism these sports have been analyzed using a deterministic perspective where the constituent dimensions of the sportsmen were independently examined and treated in isolation It was expected that the body worked as a perfect machine and once all the components were maximized the sportsmen improved their performance If the same closed recipe was applied to all the players that formed part of the squad the global team performance was expected to be enhanced As much as these reductionistic models seem coherent when contrasted in practice we see that the reality of team sports is far more different from the closed conditions in which they were idealized Team sports contain variable heterogeneous and non linear constraints which require the development of a different logic to organize their training During the last years ecological psychology the dynamical systems theory or the constraints led approach have opened interesting fields of research from which many conceptual foundations can be applied to team sports Based in this contemporary framework the current book presents the study of the players and the teams as complex systems using coordination dynamics to explain the emergence of the self organisation episodes that characterize them In addition this thinking line provides the reader with the ability to apply all these innovative concepts to their practical training scenarios Altogether it is intended to challenge the reader to re think their training strategy and to develop an original theory and practice of training specific to team sports

Modularity in Motor Control: From Muscle Synergies to Cognitive Action Representation Andrea d'Avella, Martin Giese, Yuri P Ivanenko, Thomas Schack, Tamar Flash, 2016-04-21 Mastering a rich repertoire of motor behaviors as humans and other animals do is a surprising and still poorly understood outcome of evolution development and learning Many degrees of freedom non linear dynamics and sensory delays provide formidable challenges for controlling even simple actions Modularity as a functional

element both structural and computational of a control architecture might be the key organizational principle that the central nervous system employs for achieving versatility and adaptability in motor control. Recent investigations of muscle synergies, motor primitives, compositionality, basic action concepts, and related work in machine learning have contributed to advance at different levels our understanding of the modular architecture underlying rich motor behaviors. However, the existence and nature of the modules in the control architecture is far from settled. For instance, regularity and low dimensionality in the motor output are often taken as an indication of modularity but could they simply be a byproduct of optimization and task constraints? Moreover, what are the relationships between modules at different levels such as muscle synergies, kinematic invariants, and basic action concepts? One important reason for the new interest in understanding modularity in motor control from different viewpoints is the impressive development in cognitive robotics. In comparison to animals and humans, the motor skills of today's best robots are limited and inflexible. However, robot technology is maturing to the point at which it can start approximating a reasonable spectrum of isolated perceptual, cognitive, and motor capabilities. These advances allow researchers to explore how these motor, sensory, and cognitive functions might be integrated into meaningful architectures and to test their functional limits. Such systems provide a new test bed to explore different concepts of modularity and to address the interaction between motor and cognitive processes experimentally. Thus, the goal of this Research Topic is to review, compare, and debate theoretical and experimental investigations of the modular organization of the motor control system at different levels. By bringing together researchers seeking to understand the building blocks for coordinating many muscles for planning endpoint and joint trajectories and for representing motor and behavioral actions in memory, we aim at promoting new interactions between often disconnected research areas and approaches and at providing a broad perspective on the idea of modularity in motor control. We welcome original research, methodological, theoretical, review, and perspective contributions from behavioral, system, and computational motor neuroscience, research, cognitive psychology, and cognitive robotics.

The Brilliance of Black Boys Brian L. Wright, Shelley L. Counsell, 2018-03-09 2018 NAME Philip C Chinn Book Award Winner. This much needed book will help schools and by extension society to better understand and identify the promise, potential, and possibilities of Black boys. Drawing from their wealth of experience in early childhood education, the authors present an asset and strengths based view of educating Black boys. This positive approach enables practitioners and school leaders to recognize, understand, and cultivate the diversity of social skills of Black boys in the early grades, pre-K to 3rd grade. Each chapter begins with a vignette to illustrate what is lost when Black boys are prevented from participating freely in boyhood, having to instead attend to adult and peer interactions and attitudes that view them as bad boys and troublemakers. This accessible book provides teachers with classroom strategies to help young Black boys achieve their highest potential, along with other resources for supporting their social-emotional development, such as a reading list of authentic multicultural children's books with Black boys as protagonists. Book Features: Challenges deficit views of Black boys.

in order to transform the way schools and society think talk and write about them Provides culturally responsive strategies for engaging Black boys and fostering healthy self identity and agency Discusses the importance of critical self reflection to examine attitudes and practices that inform how teachers engage with children and families Examines how school officials beginning in early childhood can stop the adultification and criminalization of Black boys **Physical Activity**
