Components of emotional meaning Johnny J. R. Fontaine,Klaus R. Scherer,Cristina Soriano,2013-08-01 Publications on emotion and the affective sciences in general have exploded in the last decade Numerous research teams and individual scholars from many different disciplines have published research papers or books about many different aspects of emotions and their role in behaviour and society However One aspect of emotional research that has been somewhat neglected is the way in which emotional terms translate into other languages When using terms like anger sadness fear disgust and joy for so called basic emotions as well as terms like shame guilt pride regret and contempt for more complex emotions it is naturally

assumed that the emotion terms used for research in the native language of the researchers and translated into English are completely equivalent in meaning. However, this is not generally the case. In many cases, there is no direct one-to-one relationship between an English term and a term in an alternative language. In fact, there can be significant differences in the way that these seemingly similar emotional terms can be applied across various languages with important implications for how we review and appraise this work. This book presents an extensive cross-cultural and cross-linguistic review of the meaning of emotion words, adopting a novel methodological approach. Based on the Component Process Model, the authors developed a new instrument to assess the meaning of emotion terms. This instrument, the GRID questionnaire, consists of a grid of 24 emotion terms spanning the emotion domain and 142 emotion features that operationalize five emotion components: Appraisals, Bodily reactions, Expressions, Action tendencies, and Feelings. For the operationalization of these five emotion components, very different emotion models from the Western and the cultural comparative emotion literature were taken into account. Components of Emotional Meaning includes contributions from psychological, cultural comparative, and linguistic perspectives, demonstrating how this new instrument can be used to empirically study very different research questions on the meaning of emotion terms. The implications of the results for major theoretical debates on emotion are also discussed. For all researchers in the affective sciences, this book is an important new reference work.

Emotions as Bio-cultural Processes Birgitt Röttger-Rössler, Hans Jürgen Markowitsch, 2009-06-12. Emotions have emerged as a topic of interest across the disciplines, yet studies and findings on emotions tend to fall into two camps: body versus brain, nature versus nurture. *Emotions as Bio-cultural Processes* offers a unique collaboration across the biological-social divide from psychology and neuroscience to cultural anthropology and sociology as 15 noted researchers develop a common language, theoretical basis, and methodology for examining this most sociocognitive aspect of our lives. Starting with our evolutionary past and continuing into our modern world of social classes and norms, these multidisciplinary perspectives reveal the complex interplay of biological, social, cultural, and personal factors at work in emotions, with particular emphasis on the nuances involved in pride and shame. A sampling of the topics: 1. The roles of the brain in emotional processing; 2. Emotional development milestones in childhood; 3. Social feeling rules and the experience of loss; 4. Emotions as commodities; The management of feelings and the self-help industry; 5. Honor and dishonor, societal and gender manifestations of pride and shame; 6. Emotion regulation and youth culture; 7. Pride and shame in the classroom. A volume of such wide and integrative scope as *Emotions as Bio-cultural Processes* should attract a large cohort of readers on both sides of the debate among them: emotion researchers, social and developmental psychologists, sociologists, social anthropologists, and others who analyze the links between humans that on the one hand differentiate us as individuals but on the other hand tie us to our socio-cultural worlds.

The Construction of the Self, Second Edition Susan Harter, 2015-05-26. An important work from a leading scholar, this book explores self-development from early childhood to adulthood. Susan Harter traces the normative stages that

define the emergence of many self processes including self esteem She also addresses individual differences and societal influences on self development Presenting pioneering empirical research Harter shows that increasingly mature features of the self have both benefits and liabilities for psychological adjustment The book highlights the causes and consequences of different types of self representations including those that are unrealistically negative or positive New to This Edition Reflects more than a decade of conceptual empirical and methodological advances Provides a broader sociocultural framework for understanding self development Chapters on emerging adulthood self esteem and physical appearance self processes in the classroom motivation cross cultural issues and the quest for authenticity Expanded chapters on childhood adolescence and the self conscious emotions Increased attention to the liabilities of our contemporary preoccupation with the self
