Luigi Pari, 2021-03-04 Energies is open to submissions for a Special Issue on Renewable Energy Production from Energy  
Crops and Agricultural Residues Biomass represents an important source of renewable and sustainable energy production Its  
increasing consumption is mainly related to the increase in global energy demand and fossil fuel prices but also to a lower  
environmental impact compared to non renewable fuels These factors take RED II directives into consideration In the past  
forestry interventions were the main supply source of biomass but in recent decades two others sources have entered the  
international scene These are dedicated energy crops and agricultural residues which are important sources of biomass for  
biofuel and bioenergy Below we consider four main value chains Oil crops Oil production from non food oilseed crops such as  
camelina Crambe safflower castor cuphea cardoon etc oil extraction and oil utilization for fuel production Lignocellulosic  
crops Biomass production from perennial grasses miscanthus giant reed switchgrass reed canary grass etc woody crops
