the advent of the Safe Drinking Water Act Amendments of 1986 many water utilities are reexamining their water treatment
practices Upcoming new regulations on disinfection and on disinfection by products in particular are the primary driving
forces for the big interest in ozone It appears that ozone with its strong disinfection capabilities and apparently lower levels
of disinfection by products compared to other disinfectants may be the oxidant disinfectant of choice Many utilities currently
using chlorine for oxidation may need to switch due to chlorine by product concerns Utilities using chloramines may need to
use ozone to meet CT requirements This book prepared by 35 international experts includes current technology on the design
operation and control of the ozone process within a drinking water plant It combines almost 100 years of European ozone
design and operating experience with North American design operations experience and the North American regulatory and
utility operational environment Topics covered include ozone chemistry toxicology design consideration engineering aspects
design of retrofit systems and the operation and economics of ozone technology The book contains a how to section on ozone
treatability studies which explains what information can be learned using treatability studies at what scale bench pilot or
demonstration plant and how this information can be used to design full scale systems It also includes valuable tips regarding
important operating practices as well as guidance on retrofits and the unique issues involved with retrofitting the ozone
process With ozone being one of the hottest areas of interest in drinking water this book will prove essential to all water
