International Law Obligations on Climate Change Mitigation Benoit Mayer, 2022-07-11 Recent years have witnessed exciting developments in international negotiations litigation and scholarship about climate change but doctrinal research in the field remains in its infancy In particular little is known about how fast states are required to limit and reduce their greenhouse gas emissions The first part of the book identifies the relevant obligations through an analysis of treaties custom and other sources of international law Beyond express quantified commitments contained for instance in nationally determined contributions the book sheds light on the existence of general obligations of due diligence While these general obligations are difficult to interpret they are often more demanding The second part explores how these general obligations can be applied objectively for instance by a court in concrete cases Instead of an improbable judicial assessment of a state's requisite level of mitigation action the book shows the possibility of assessing a state's conduct based on the measures that general mitigation obligations entail These measures relate to corollary duties of cooperation vigilance and consistency This book presents a first comprehensive doctrinal study of states obligations on climate change mitigation It shows that such obligations arise not only from climate treaties but also from customary international law unilateral declarations and possibly human rights treaties It also explores the interactions between these multiple obligations

Carbon-Free Shipping and Shipping Carbon Stephen Girvin, Vibe Ulfbeck, 2024-08-22 This book explores the private law implementation of the new international and EU regulatory framework targeting decarbonisation in the shipping industry Compared with other sectors the shipping industry has traditionally been labelled a slow mover concerning the sustainability agenda However new regulatory measures on carbon reduction both internationally and in the EU require fundamentally new developments in the industry This book focuses on the goal of carbon reduction from a private law perspective and considers how the new regulatory framework can be implemented in the shipping industry This book studies existing contractual provisions in charterparties and bills of lading alongside new contractual model clauses designed to facilitate carbon reduction It considers how the new clauses should be interpreted whether they will transform traditional shipping contracts into more collaborative contracts and how they will interact with other clauses in the contract and with other contracts in the supply

chain The contractual analysis is considered in context reflecting on enforcement issues such as Port State Control PSC the Poseidon Principles and climate change litigation The book also analyses the related topic of shipping contracts for carbon storage as a necessary means of meeting carbon reduction targets The book is intended to pave the way for understanding how core shipping contracts can work in this new context and the extent to which the new types of clauses will profoundly transform contracts It presents contributions by experienced and younger academics and practitioners from Asian European and Scandinavian legal systems

The Regime of Straits in International Law Bing Bing Jia, 1998 Straits are peripheral formations in the study of geography but have long been a source of controversy in international relations They connect separate seas and divide the territory of states This geographical fact invites legal disputes over international boundary drawing request for passage by foreign ships assertion of territorial control over the waters forming straits and the basis for a regime generally accepted as law in our times This is a thorough and well documented book which combines elements of history geography international shipping and the law of the sea It asks the central question what exactly is the current law governing this area and also goes on to consider the concept of international straits the distinction between existing treaty based regimes and the general regime and the special characteristics of straits that separate them from similar arms of the sea in terms of law In answering these questions the author takes us back to the first regime for international straits in 1949 through to the practices of the present day This will be an invaluable text for all international lawyers particularly those specializing in the law of sea
