Practical Bilevel Optimization Jonathan F. Bard, 2013-03-09 The use of optimization techniques has become integral to the design and analysis of most industrial and socio economic systems Great strides have been made recently in the solution of large scale problems arising in such areas as production planning airline scheduling government regulation and engineering design to name a few Analysts have found however that standard mathematical programming models are often inadequate in these situations because more than a single objective function and a single decision maker are involved Multiple objective programming deals with the extension of optimization techniques to account for several objective functions while game theory deals with the inter personal dynamics surrounding conflict Bilevel programming the focus of this book is in a narrow sense the combination of the two It addresses the problem in which two decision makers each with their individual objectives act and react in a noncooperative sequential manner The actions of one affect the choices and payoffs available to the other but neither player can completely dominate the other in the traditional sense
