Illinois Issues ,2014 **Socioeconomic Inequality and Student Outcomes** Louis Volante, Sylke V. Schnepf, John Jerrim, Don A. Klinger, 2019-08-31 This book examines socioeconomic inequality and student outcomes across various

Western industrialized nations and the varying success they have had in addressing achievement gaps in lower socioeconomic status student populations. It presents the national profiles of countries with notable achievement gaps within the respective school aged student populations, explains the trajectory of achievement results in relation to both national and international large scale assessment measures and discusses how relevant education policies have evolved within their national contexts. Most importantly, the national profiles investigate the effectiveness of policy responses that have been adopted to close the achievement gap in lower socioeconomic status student populations. This book provides a cross national analysis of policy approaches designed to address socioeconomic inequality. *Tests and Proofs* Bernhard K. Aichernig, Carlo A. Furia, 2016-06-20. This book constitutes the refereed proceedings of the 10th International Conference on Tests and Proofs TAP 2016 held as part of STAF 2016 in Vienna Austria in July 2016. The 8 full papers, 2 short papers and 1 tool demonstration paper presented in this volume were carefully reviewed and selected from 19 submissions. The book also contains one invited talk in full paper length. The TAP conference promotes research in verification and formal methods that targets the interplay of proofs and testing, the advancement of techniques of each kind and their combination with the ultimate goal of improving software and system dependability. **International Handbook of Mathematical Learning Difficulties** Annemarie Fritz, Vitor Geraldi Haase, Pekka Räsänen, 2019-01-30. This comprehensive volume provides teachers, researchers and education professionals with cutting edge knowledge developed in the last decades by the educational behavioural and neurosciences, integrating cognitive developmental and socioeconomic approaches to deal with the problems children face in learning mathematics. The neurocognitive mechanisms and the cognitive processes underlying acquisition of arithmetic abilities and their significance for education have been the subject of intense research in the last few decades, but the most part of this research has been conducted in non applied settings and there is still a deep discrepancy between the level of scientific knowledge and its implementation into actual educational settings. Now it is time to bring the results from the laboratory to the classroom. Apart from bringing the theoretical discussions to educational settings, the volume presents a wide range of methods for early detection of children with risks in mathematics learning and strategies to develop effective interventions based on innovative cognitive test instruments. It also provides insights to translate research knowledge into public policies in order to address socioeconomic issues. And it does so from an international perspective, dedicating a whole section to the cultural diversity of mathematics learning difficulties in different parts of the world. All of this makes the *International Handbook of Mathematical Learning Difficulties* an essential tool for those involved in the daily struggle to prepare the future generations to succeed in the global knowledge society.
