Mobile Learning and Mathematics Helen Crompton,John Traxler,2015-02-11 Mobile Learning and Mathematics provides an overview of current research on how mobile devices are supporting mathematics educators in classrooms across the globe Through nine case studies chapter authors investigate the use of mobile technologies over a range of grade levels and mathematical topics while connecting chapters provide a strong foundational background in mobile learning theories instructional design and learner support For

current educators Mobile Learning and Mathematics provides concrete ideas and strategies for integrating mobile learning into their mathematics instruction for example by sharing resources that will help implement Common Core State Standards or by streamlining the process of selecting from the competing and often confusing technology options currently available A cutting edge research volume this collection also provides a springboard for educational researchers to conduct further study

Teaching and Learning Secondary School Mathematics Ann Kajander, Jennifer Holm, Egan J Chernoff, 2018-10-24 This volume brings together recent research and commentary in secondary school mathematics from a breadth of contemporary Canadian and International researchers and educators It is both representative of mathematics education generally as well as unique to the particular geography and culture of Canada The chapters address topics of broad applicability such as technology in learning mathematics recent interest in social justice contexts in the learning of mathematics as well as Indigenous education The voices of classroom practitioners the group ultimately responsible for implementing this new vision of mathematics teaching and learning are not forgotten Each section includes a chapter written by a classroom teacher making this volume unique in its approach We have much to learn from one another and this volume takes the stance that the development of a united vision supported by both research and professional dialog provides the first step **Math**

Instruction for Students with Learning Problems Susan Perry Gurganus, 2017-02-24 Math Instruction for Students with Learning Problems Second Edition provides a research based approach to mathematics instruction designed to build confidence and competence in pre and in service PreK 12 teachers This core textbook addresses teacher and student attitudes toward mathematics as well as language issues specific mathematics disabilities prior experiences and cognitive and metacognitive factors The material is rich with opportunities for class activities and field extensions and the second edition has been fully updated to reference both NCTM and CCSSM standards throughout the text and includes an entirely new chapter on measurement and data analysis **Nurturing Your Child's Math and Literacy in Pre-K-Fifth Grade**

Mary Mueller, Alisa Hindin, 2016-11-23 With recent changes in the curriculum and standards in language arts and mathematics parents often are challenged to find ways to help their children be successful in their learning endeavors While parents want to be involved in their children s education they are often unsure of their role in their children s learning and the best ways to help their children to succeed academically Moreover with the changes in how math and literacy are being taught parents often struggle with helping even first grade children with their homework In this book we set out to alleviate this struggle by offering parents a resource they can use to navigate their child s education communicate with teachers and support their children in learning mathematics and literacy After providing an overview of the current educational climate and tips for communication with teachers we share strategies and suggestions parents can use to assist their children in language arts and mathematics We provide detailed descriptions of activities games books and conversations that connect with what children will be learning at each grade level **Handbook of Research on Transforming Mathematics**

Teacher Education in the Digital Age Niess, Margaret, Driskell, Shannon, Hollebrands, Karen, 2016-04-22 The digital age provides ample opportunities for enhanced learning experiences for students however it can also present challenges for educators who must adapt to and implement new technologies in the classroom The Handbook of Research on Transforming Mathematics Teacher Education in the Digital Age is a critical reference source featuring the latest research on the development of educators knowledge for the integration of technologies to improve classroom instruction Investigating emerging pedagogies for preservice and in service teachers this publication is ideal for professionals researchers and educational designers interested in the implementation of technology in the mathematics classroom **Pathways to Reform** Alexandra W. Logue, 2017-09-08 A personal account of the implementation of a controversial credit transfer program at the nation's third largest university Change is notoriously difficult in any large organization Institutions of higher education are no exception From 2010 to 2013 Alexandra Logue then chief academic officer of The City University of New York led a controversial reform initiative known as Pathways The program aimed to facilitate the transfer of credits among the university's nineteen constituent colleges in order to improve graduation rates a long recognized problem for public universities such as CUNY Hotly debated Pathways met with vociferous resistance from many faculty members drew the attention of local and national media and resulted in lengthy legal action In Pathways to Reform Logue the figure at the center of the maelstrom blends vivid personal narrative with an objective perspective to tell how this hard fought plan was successfully implemented at the third largest university in the United States Logue vividly illustrates why change does or does not take place in higher education and the professional and personal tolls exacted Looking through the lens of the Pathways program and factoring in key players she analyzes how governance structures and conflicting interests along with other institutional factors impede change which Logue shows is all too rare slow and costly In this environment she argues it is shared governance combined with a strong central decision making authority that best facilitates necessary reform Logue presents a compelling investigation of not only transfer policy but also power dynamics and university leadership Shedding light on the inner workings of one of the most important public institutions in the nation Pathways to Reform provides the first full account of how despite opposition a complex higher education initiative was realized All net royalties received by the author from sales of this book will be donated to The City University of New York to support undergraduate student financial aid Monthly Catalogue, United States Public Documents, 1965 Locally AH-Algebras Huaxin Lin, 2015-04-09 A unital separable algebra is said to be locally AH with no dimension growth if there is an integer satisfying the following for any and any compact subset there is a unital subalgebra of with the form where is a compact metric space with covering dimension no more than and is a projection such that The authors prove that the class of unital separable simple algebras which are locally AH with no dimension growth can be classified up to isomorphism by their Elliott invariant As a consequence unital separable simple algebras which are locally AH with no dimension growth are isomorphic to a unital simple AH algebra with

no dimension growth **The Next Generation of Testing** Hong Jiao, Robert W. Lissitz, 2015-11-01 The Race To The Top RTTP federal education policy fostered a new generation of state tests This policy advocated adopting common core standards which set a higher level of learning targets for students in the US K 12 education These standards are intended to assess higher order thinking skills and prepare students ready for college and career In the meantime they are aligned with those for international assessments which keep US students abreast of their international peers Furthermore the new generation of state tests requires the use of technology enhanced items to align student assessments with student learning environment Computer technology is indispensable to accomplish this goal Computer based tests related to common core standards are different from previous state computer based tests in two important aspects one is that the current version requires accurate assessment of students along all ability levels and the other is that it promotes the use of an efficient test delivery system essentially the use of computerized adaptive assessment in K 12 state testing programs In addition to providing summative information about student learning the new common core tests add formative assessment component in the whole assessment system to provide timely feedback to students and teachers during the process of student learning and teacher instruction As with its predecessor the new assessment policy also holds teachers and schools accountable for student learning With the requirements by the new federal education policy states formed two consortia Partnership for Assessment of Readiness for College and Careers PARCC and Smarter Balanced Assessment Consortium SBAC to develop assessments in alignment with the new common core standards This book is based on the presentations made at the Thirteenth Annual Maryland Assessment Research Center's Conference on The Next Generation of Testing Common Core Standards Smarter Balanced PARCC and the Nationwide Testing Movement Experts from the consortia and nationwide overviewed the intention history and the current status of this nationwide testing movement Item development test design and transition from old state tests to the new consortia tests are discussed Test scoring and reporting are specially highlighted in the book The challenges related to standard setting for the new test especially in the CAT environment and linking performance standards from state tests with consortium tests were explored The issues of utilizing the consortium test results to evaluate students college and career readiness is another topic addressed in the book The last chapters address the critical issue of validity in the new generation of state testing programs Overall this book presents the latest status of the development of the two consortium assessment systems It addresses the most challenging issues related to the next generation of state testing programs including development of innovative items assessing higher order thinking skills scoring of such items standard setting and linkage with the old state specific standards and validity issues This edited book provides a very good source of information related to the consortium tests based on the common core standards *The Budget of the United States Government* United States. Office of Management and Budget, 2015 Discrete-Time Dynamics of Structured Populations and Homogeneous Order-Preserving Operators Horst R. Thieme, 2024-05-07 A fundamental

question in the theory of discrete and continuous time population models concerns the conditions for the extinction or persistence of populations a question that is addressed mathematically by persistence theory For some time it has been recognized that if the dynamics of a structured population are mathematically captured by continuous or discrete semiflows and if these semiflows have first order approximations the spectral radii of certain bounded linear positive operators better known as basic reproduction numbers act as thresholds between population extinction and persistence This book combines the theory of discrete time dynamical systems with applications to population dynamics with an emphasis on spatial structure The inclusion of two sexes that must mate to produce offspring leads to the study of operators that are positively homogeneous of degree one and order preserving rather than linear and positive While this book offers an introduction to ordered normed vector spaces some background in real and functional analysis including some measure theory for a few chapters will be helpful The appendix and selected exercises provide a primer about basic concepts and about relevant topics one may not find in every analysis textbook

Frames and Other Bases in Abstract and Function Spaces Isaac Pesenson, Quoc Thong Le Gia, Azita Mayeli, Hrushikesh Mhaskar, Ding-Xuan Zhou, 2017-06-11 The first of a two volume set on novel methods in harmonic analysis this book draws on a number of original research and survey papers from well known specialists detailing the latest innovations and recently discovered links between various fields Along with many deep theoretical results these volumes contain numerous applications to problems in signal processing medical imaging geodesy statistics and data science The chapters within cover an impressive range of ideas from both traditional and modern harmonic analysis such as the Fourier transform Shannon sampling frames wavelets functions on Euclidean spaces analysis on function spaces of Riemannian and sub Riemannian manifolds Fourier analysis on manifolds and Lie groups analysis on combinatorial graphs sheaves co sheaves and persistent homologies on topological spaces Volume I is organized around the theme of frames and other bases in abstract and function spaces covering topics such as The advanced development of frames including Sigma Delta quantization for fusion frames localization of frames and frame conditioning as well as applications to distributed sensor networks Galerkin like representation of operators scaling on graphs and dynamical sampling A systematic approach to shearlets with applications to wavefront sets and function spaces Prolate and generalized prolate functions spherical Gauss Laguerre basis functions and radial basis functions Kernel methods wavelets and frames on compact and non compact manifolds

Non-Semisimple Extended Topological Quantum Field Theories Marco De Renzi, 2022-05-24 View the abstract [Homology of Normal Chains and Cohomology of Charges](#) Th. De Pauw, R. M. Hardt, W. F. Pfeffer, 2017-04-25 The authors consider a category of pairs of compact metric spaces and Lipschitz maps where the pairs satisfy a linearly isoperimetric condition related to the solvability of the Plateau problem with partially free boundary It includes properly all pairs of compact Lipschitz neighborhood retracts of a large class of Banach spaces On this category the authors define homology and cohomology functors with real coefficients which satisfy the Eilenberg Steenrod

axioms but reflect the metric properties of the underlying spaces As an example they show that the zero dimensional homology of a space in our category is trivial if and only if the space is path connected by arcs of finite length The homology and cohomology of a pair are respectively locally convex and Banach spaces that are in duality Ignoring the topological structures the homology and cohomology extend to all pairs of compact metric spaces For locally acyclic spaces the authors establish a natural isomorphism between their cohomology and the ech cohomology with real coefficients **Zeta**

Integrals, Schwartz Spaces and Local Functional Equations Wen-Wei Li,2018-11-02 This book focuses on a conjectural class of zeta integrals which arose from a program born in the work of Braverman and Kazhdan around the year 2000 the eventual goal being to prove the analytic continuation and functional equation of automorphic L functions Developing a general framework that could accommodate Schwartz spaces and the corresponding zeta integrals the author establishes a formalism states desiderata and conjectures draws implications from these assumptions and shows how known examples fit into this framework supporting Sakellaridis vision of the subject The collected results both old and new and the included extensive bibliography will be valuable to anyone who wishes to understand this program and to those who are already working on it and want to overcome certain frequently occurring technical difficulties Scalar, Vector, and Matrix
