Around Langlands Correspondences Farrell Brumley,Maria Paula Gomez Aparicio,Alberto Minguez,2017 Presents through a mix of research and expository articles some of the fascinating new directions in number theory and representation theory arising from recent developments in the Langlands program Special emphasis is placed on nonclassical versions of the conjectural Langlands correspondences where the underlying field is no longer the complex numbers

From Frechet Differentials to Firing Tables Alan Gluchoff,2025-01-03 This monograph explores the history of the contribution to ballistics by the American mathematician Gilbert Ames Bliss during World War I Drawing on the then evolving calculus of variations Bliss pioneered a novel technique for solving the problem of differential variations in ballistic trajectory Called Bliss adjoint method this technique was both hailed and criticized at the time it was seen as both a triumphant application of pure mathematics to an applied problem and as a complex intrusion of higher mathematics into the jobs of military personnel not particularly interested in these matters Although he received much praise immediately after the War the details of Bliss work its furthering of pure mathematical thought and its absorption into mainstream ballistic work and instruction have never been adequately examined Gluchoff explores the mathematics of Bliss work and the strands from which his technique was developed He then documents the efforts to make the adjoint method accessible to military officers and the conflicts that emerged as a result both between mathematicians and officers and among mathematicians themselves The eventual absorption of the adjoint method into range firing table construction is considered by looking at later technical books which incorporate it and finally its influence on the ongoing development of functional calculus is detailed From Frechet Differentials to Firing Tables will appeal to historians of mathematics physics engineering and warfare as well as current researchers professors and students in these areas **Theory, Numerics and Applications of Hyperbolic Problems II** Christian Klingenberg,Michael Westdickenberg,2018-06-27 The second of two volumes this edited proceedings book features research presented at the XVI International Conference on Hyperbolic Problems held in Aachen Germany in summer 2016 It focuses on the theoretical applied and computational aspects of hyperbolic partial differential equations systems of hyperbolic conservation laws wave equations etc and of related mathematical models PDEs of mixed type kinetic equations nonlocal or and discrete models found in the field of applied sciences **Breaking the STEM Stereotype** Amanda Alzena Sullivan,2019-10-21 Men continue to outnumber women in numerous technical STEM Science Technology Engineering and Math fields such as engineering and computer science Prior work demonstrates the importance of introducing girls to STEM content early on before gender stereotypes are ingrained However many parents and teachers are not sure how to do this in a developmentally appropriate and playful way Breaking the STEM Stereotype Reaching Girls in Childhood by Dr Amanda Sullivan Ph D explores the various social cultural and psychological reasons behind the persistent gender disparity between men and women in STEM fields By explaining the powerful role of stereotypes the media and

experiences with peers and adults during the foundational early childhood years this book builds the case of early childhood being a critical time in development to reach girls Breaking the STEM Stereotype is set up in three parts Part 1 provides the current state of the gender divide in each aspect of STEM and explores why early childhood is a critical time to address this divide Part 2 explores gender identity development and gender stereotypes as well as the influences of the media advertising and adult and peer role models on young children Finally Part 3 arms readers with the knowledge they need to dispel gender stereotypes in STEM It provides suggestions on tools technologies and kits that can be used with young girls beginning in pre kindergarten It provides materials needed to design effective curricula and activities to engage girls with STEM in playful ways that build on their personal interests   Real-World Electronic Voting Feng Hao,Peter Y. A. Ryan,2016-11-30 Real World Electronic Voting Design Analysis and Deployment captures all major developments in electronic voting since 2003 in a real world setting It covers three broad categories e voting protocols attacks reported on e voting and new developments on the use of e voting This book explores recent innovations in both poll site and remote voting systems and their application throughout the world The requirements of elections are analysed the available tools and technologies are described and a variety of modern systems are presented in detail together with discussions of deployments This is an invaluable resource for election professionals researchers and policy makers alike Key Features Reviews both technical and social aspects of e voting Covers e voting protocols attacks reported on e voting and new developments on the use of e voting Designed for government election practitioners and policy makers who want to understand the threats and opportunities in e voting and assess its suitability for future elections   *Assessment Approaches to Support Bycatch Management for Marine Mammals* Tessa Francis,Jeff Moore,Andre Eric Punt,Randall Reeves,2022-06-21   *Hyperbolic Partial Differential Equations* Matthew Witten,2014-05-17 Hyperbolic Partial Differential Equations Volume 1 Population Reactors Tides and Waves Theory and Applications covers three general areas of hyperbolic partial differential equation applications These areas include problems related to the McKendrick Von Foerster population equations other hyperbolic form equations and the numerical solution This text is composed of 15 chapters and begins with surveys of age specific population interactions populations models of diffusion nonlinear age dependent population growth with harvesting local and global stability for the nonlinear renewal equation in the Von Foerster model and nonlinear age dependent population dynamics The next chapters deal with various applications of hyperbolic partial differential equations to such areas as age structured fish populations density dependent growth in a cell colony boll weevil cotton crop modeling age dependent predation and cannibalism parasite populations growth of microorganisms and stochastic perturbations in the Von Foerster model These topics are followed by discussions of bifurcation of time periodic solutions of the McKendrick equation the periodic solution of nonlinear hyperbolic problems and semigroup theory as applied to nonlinear age dependent population dynamics Other chapters explore the stability of biochemical reaction tanks an ADI model for the Laplace tidal equations the Carleman equation the nonequilibrium behavior

of solids that transport heat by second sound and the nonlinear hyperbolic partial differential equations and dynamic programming The final chapters highlight two explicitly numerical applications a predictor convex corrector method and the Galerkin approximation in hyperbolic partial differential equations This book will prove useful to practicing engineers population researchers physicists and mathematicians **Correspondence of John Wallis (1616-1703)** Philip Beeley,Christoph J. Scriba,2014-07-31 The Correspondence of John Wallis 1616 1703 is a critically acclaimed resource in the history of early modern science Volume IV covers the period from 1672 to April 1675 and contains over eighty previously unpublished letters It documents Wallis s role in the crucial debate over the method of tangents involving figures such as Sluse James Gregory Hudde Barrow Newton and Christiaan Huygens In this way it illuminates further an important part of the history of the calculus Wallis s letters also provide valuable new insights into mathematical book production and the importance of the international exchange of books in the growth and dissemination of mathematical knowledge We learn more about the part played by the intelligencer John Collins and the astronomer royal John Flamsteed in the edition of Jeremiah Horrox s Opera posthuma published by Wallis in 1673 There are also new insights on the background to Wallis s early work on equations and the reasons why he criticized Gaston Pardies s proposed tract on motion The causes of the breakdown in Wallis s epistolary relation to Christiaan Huygens following the publication of the Horologium oscillatorium in 1673 are also revealed Many letters reflect Wallis s active involvement in the Royal Society Through the medium of correspondence the Savilian professor participated in numerous debates such as those over the anomalous suspension of mercury in the Torricellian tube or Hevelius s use of plain sights in positional astronomy The volume allows us to gain a deeper understanding of the background to these debates Furthermore the volume throws important new light on the history of the University of Oxford and of the University Press in the early modern period As keeper of the University Archives Wallis was one of the institution s highest officers Scarcely any event of note concerning the University did not require his involvement in some way and this is reflected in numerous letters and documents which the volume publishes for the first time
