a significant contribution to the field of study Flooding is a costly natural disaster in terms of damage to land property and infrastructure This volume describes the latest tools and technologies for modeling mapping and predicting large scale flood risk It also presents readers with a range of remote sensing data sets successfully used for predicting and mapping floods at different scales These resources can enable policymakers public planners and developers to plan for and respond to flooding with greater accuracy and effectiveness Describes the latest large scale modeling approaches including hydrological models 2 D flood inundation models and global flood forecasting models Showcases new tools and technologies such as Aqueduct a new web based tool used for global assessment and projection of future flood risk under climate change scenarios Features case studies describing best practice uses of modeling techniques tools and technologies Global Flood Hazard is an indispensable resource for researchers consultants practitioners and policy makers dealing with flood risk flood disaster response flood management and flood mitigation

The Mathematical-Function Computation Handbook Nelson H.F. Beebe,2017-08-20 This highly comprehensive handbook provides a substantial advance in the computation of elementary and special functions of mathematics extending the function coverage of major programming languages well beyond their international standards including full support for decimal floating point arithmetic Written with clarity and focusing on the C language the work pays extensive attention to little understood aspects of floating point and integer arithmetic and to software portability as well as to important historical architectures It extends support to a future 256 bit floating point format offering 70 decimal digits of precision Select Topics and Features references an exceptionally useful author maintained MathCW website containing source code for the book s software compiled libraries for numerous systems pre built C compilers and other related materials offers a unique approach to covering mathematical function computation using decimal arithmetic provides extremely versatile appendices for interfaces to numerous other languages Ada C C Fortran Java and Pascal presupposes only basic familiarity with computer programming in a common language as well as early level algebra supplies a library that readily adapts for existing scripting languages with minimal effort supports both binary and decimal arithmetic in up to 10 different floating point formats covers a significant portion with highly accurate implementations of the U S National Institute of Standards and Technology s 10 year project to codify mathematical functions This highly practical text reference is an invaluable tool for advanced undergraduates recording many lessons of the intermingled history of computer hardware and software numerical algorithms and mathematics In addition professional numerical analysts and others will find the handbook of real interest and utility because it builds on research by the mathematical software community over the last four decades

[Failure Up Close](#) Jay P. Greene,Michael Q. McShane,2018-01-17 For many reasons failure in education reform is rarely admitted Even though it is incredibly hard work to try and improve the enormous and diverse American education system because there are political consequences of admitting that a particular effort did not live up to its promises and pressure from philanthropic funders to show success

unsuccessful efforts are often swept under the rug or papered over with public relations efforts that avoid wrestling with the tough realities of educational improvement This doesn't help anyone As any educator will tell you failure is an essential part of learning Insofar as education reform needs to be a learning movement itself it has to be able to admit where it has failed and learn from it Failure Up Close engages a select group of scholars from across the ideological spectrum to examine particular education reform efforts of recent years that have not succeeded and offer lessons for school and system improvement that can be learned from them Rather than view failure as negative this volume looks at failure as an opportunity to learn and grow In fact the editors endeavored to find authors that would analyze reforms for which they had some fundamental sympathy The goal is not to bash particular efforts or castigate their supporters but rather to help those supporters understand how to do what they do better and ultimately do better for children

John Joseph Mathews Michael

Snyder, 2017-05-11 John Joseph Mathews 1894 1979 is one of Oklahoma's most revered twentieth century authors An Osage Indian he was also one of the first Indigenous authors to gain national renown Yet fame did not come easily to Mathews and his personality was full of contradictions In this captivating biography Michael Snyder provides the first book length account of this fascinating figure Known as Jo to all his friends Mathews had a multifaceted identity A novelist naturalist biographer historian and tribal preservationist he was a true man of letters Snyder draws on a wealth of sources many of them

previously untapped to narrate Mathews's story. Much of the writer's family life, especially his two marriages and his relationships with his two children and two stepchildren, is explored here for the first time. Born in the town of Pawhuska in Indian Territory, Mathews attended the University of Oklahoma before venturing abroad and earning a second degree from Oxford. He served as a flight instructor during World War I, traveled across Europe and northern Africa, and bought and sold land in California. A proud Osage who devoted himself to preserving Osage culture, Mathews also served as tribal councilman and cultural historian for the Osage Nation. Like many gifted artists, Mathews was not without flaws. And perhaps in the eyes of some critics, he occupies a nebulous space in literary history. Through insightful analysis of his major works, especially his semiautobiographical novel *Sundown* and his meditative *Talking to the Moon*, Snyder revises this impression. The story he tells of one remarkable individual is also the story of the Osage Nation, the state of Oklahoma, and Native America in the twentieth century.

Engineering Applications of Lasers and Holography Winston Kock, 2013-06-29 This book is intended for upperclass college students as an introduction to the growing field of coherent optics and to the increasing number of its applications and also for those versed in other fields who wish to gain perspective and insight without detailed calculations. It is an outgrowth of the author's Science Study Series book *Lasers and Holography*. Besides being an updated and expanded version of that book, it includes discussions of numerous recent applications. It differs in its slightly higher analytical level and in the inclusion of large numbers of references which enable the reader to obtain further information on subjects of interest to him. The level was selected to match the capabilities of students in their middle college years so as to permit them to make an early assessment of possible career interests in any of the many interdisciplinary fields now embracing the technologies of modern optics. It is hoped that the book can be used as has occurred rather extensively with another of the author's Science Study Series books, *Sound Waves and Light Waves*, as an auxiliary reading assignment for students in various disciplines. The author strongly believes that the promise of continued growth in this field, as evidenced by the extensive participation in technology developments by industry both within the U.S. and abroad, identifies the subject as Doubleday 1969 hard cover and paperback.

Networked Governance and Transatlantic Relations Gabriella Paar-Jakli, 2014-04-29 In today's complex and interconnected world, scholars of international relations seek to better understand challenges spurred by intensified global communication and interaction. The complex connectedness of modern society and politics compels us to

investigate the pattern of interconnections among actors who inhabit social and political spaces Gabriella Paar Jakli's study aims to advance theory and practice by examining the networks used by specialists in North America and Europe to achieve their policy goals in the area of science and technology Her book suggests that to overcome policy problems transnationally three critical factors should be considered First as science and technology policy becomes increasingly critical to resolving global issues it should be regarded as an integral element of the foreign policy process Second as liberal international relations theory argues the increasing role of NGOs must be taken seriously alongside states as vital agents of policy reform Third as transatlantic relations remain center to maintaining the global order they must be reconsidered Paar Jakli assesses the role of digital networks as facilitators of regional cooperation Utilizing various techniques of social network analysis her research indicates an active and structurally discernible network in cyberspace among transatlantic organizations and demonstrates the role of virtual networks as facilitators of cooperative arrangements in transatlantic relations Paar Jakli's original research uses social network analysis to investigate transatlantic cooperation a new approach that will be noteworthy to network and transatlantic scholars as well as policymakers

Theoretic Concepts in Computer Science WG 2016 held in Istanbul Turkey in June 2016 The 25 papers presented in this volume were carefully reviewed and selected from 74 submissions The WG conferences aim to connect theory and practice by demonstrating how graph theoretic concepts can be applied to various areas of computer science and by extracting new graph problems from applications Their goal is to present new research results and to identify and explore directions of future research Drawing Futures Bob Sheil, Frédéric Migayrou, Luke Pearson, Laura Allen, 2016-11-11 Drawing Futures

brings together international designers and artists for speculations in contemporary drawing for art and architecture Despite numerous developments in technological manufacture and computational design that provide new grounds for designers the act of drawing still plays a central role as a vehicle for speculation There is a rich and long history of drawing tied to innovations in technology as well as to revolutions in our philosophical understanding of the world In reflection of a society now underpinned by computational networks and interfaces allowing hitherto unprecedented views of the world the changing status of the drawing and its representation as a political act demands a platform for reflection and innovation Drawing Futures will present a compendium of projects writings and interviews that critically reassess the act of drawing and where its future may lie Drawing Futures focuses on the discussion of how the field of drawing may expand synchronously alongside technological and computational developments The book coincides with an international conference of the same name taking place at The Bartlett School of Architecture UCL in November 2016 Bringing together practitioners from many creative fields the book discusses how drawing is changing in relation to new technologies for the production and
