Lebon, José Casas-Vázquez, 2010-09-16 The fast progress in many areas of research related to non equilibrium thermodynamics

has prompted us to write a fourth edition of this book Like in the previous editions our main concern is to open the subject to the widest audience including students teachers and researchers in physics chemistry engineering biology and materials sciences Our objective is to present a general view on several open problems arising in non equilibrium situations and to afford a wide perspective of applications illustrating their practical outcomes and consequences A better comprehension of the foundations is generally correlated to an increase of the range of applications implying mutual feedback and cross fertilization Truly thermodynamic methods are widely used in many areas of science but surprisingly the active dynamism of thermodynamics as a field on its own is not sufficiently perceived outside a relatively reduced number of specialized researchers Extended irreversible thermodynamics EIT goes beyond the classical formalisms based on the local equilibrium hypothesis it was also referred to in an earlier publication by the authors Lebon et al 1992 as a thermodynamics of the third type as it provides a bridge between classical irreversible thermodynamics and rational thermodynamics enlarging at the same time their respective range of application The salient feature of the theory is that the fluxes are incorporated into the set of basic variables
