Executive function is an umbrella term for various cognitive processes that are central to goal directed behavior thoughts
and emotions These processes are especially important in novel or demanding situations which require a rapid and flexible
adjustment of behavior to the changing demands of the environment The development of executive function relies on the
maturation of associated brain regions as well as on stimulation in the child s social contexts especially the home and school
Over the past decade the term executive function has become a buzzword in the field of education as both researchers and
educators underscore the importance of skills like goal setting planning and organizing in academic success Accordingly in
initiating this Research Topic and eBook our goal was to provide a forum for state of the art theoretical and empirical work
on this that both facilitates communication among researchers from diverse fields and provides a theoretically sound source
of information for educators The contributors to this volume who hail from several different countries in Europe and North
America have certainly accomplished this goal in their nuanced and cutting edge depictions of the complex links among
various executive function components and educational success *Annual Report of the Civil Service Commissioners of the*
