Ran the Schools Thomas Armstrong Ph.D., 2019-10-11. Many world-class thinkers and creators have been concerned about the state of education in the United States. Discover their thoughts on how children really learn and what teachers must do to optimally tap children's latent abilities. During the last three decades, education reformers have pushed standardized testing and policies like No Child Left Behind and Common Core to improve test scores and proficiency in basic skills. However, during this period, that author Thomas Armstrong calls the miseducation of America, a number of troubling trends have surfaced, including a decrease in creative thinking scores among children in kindergarten through third grade. Rather than focus on what's wrong with the education system that has produced these outcomes, Armstrong lays out what creative thinkers know about how children should be educated. In an extended thought experiment, he asks what would happen if we turned the reins of educational policy over not to the politicians and educational bureaucrats but to eminent thinkers and creators like Albert Einstein, Pablo Picasso, Martin Luther King Jr., Rachel Carson, Doris Lessing, Jane Goodall, and other seminal culture builders. What might they say about the best way to educate a child? If Einstein Ran the Schools suggests that the answers to this intriguing question should guide future efforts to reform our nation's schools. **High School Mathematics**

The Robot Factory Joseph Ganem,2018-08-27 This book exposes a disturbing misuse of the scientific method to advance policies and agendas that are in fact detrimental to both science and education The author a physics professor examines two related trends in education the practice of data driven reform and the disparaging of the traditional liberal arts in favor of programs with a heavy emphasis on science and technology Many of the reforms being foisted on educators have more in common with pseudo science than real science The reduction of education to a commodity and the shilling of science as a means to enhance corporate profits lead to an impoverished and stunted understanding of science in particular and of education in general How is it possible for schools with all students learning at grade level to be rated as failing teachers to be rated as ineffective after all their students meet their learning outcomes rising grade school math standards to result in more college students needing remedial math politicians to disparage scientists and their results but argue that more students should study science These bizarre outcomes have happened and are the result of an education system that misuses and misrepresents math and science in the classroom and in crafting education policies This book exposes the flawed and fallacious thinking that is damaging education at all levels throughout the United States and makes a compelling case for rethinking the standardized optimized and quantified approaches in vogue in education today to accommodate the different needs of individual teachers and students
