Topology and Analysis B. Booss, D.D. Bleecker, 2012-12-06

The Motivation

With intensified use of mathematical ideas the methods and techniques of the various sciences and those for the solution of practical problems demand of the mathematician not only greater readiness for extra mathematical applications but also more comprehensive orientations within mathematics

In applications it is frequently less important to draw the most far reaching conclusions from a single mathematical idea than to cover a subject or problem area tentatively by a proper variety of mathematical theories

To do this the mathematician must be familiar with the shared as well as specific features of different mathematical approaches and must have experience with their interconnections

The Atiyah Singer Index Formula one of the deepest and hardest results in mathematics probably has wider ramifications in topology and analysis than any other single result

F Hirzebruch and offers perhaps a particularly fitting example for such an introduction to Mathematics

In spite of its difficulty and immensely rich interrelations the realm of the Index Formula can be delimited and thus its ideas and methods can be made accessible to students in their middle semesters

In fact the Atiyah Singer Index Formula has become progressively easier and more transparent over the years

The discovery of deeper and more comprehensive applications see Chapter 11

4 brought with it not only a vigorous exploration of its methods particularly in the many faceted and always new presentations of the material by M F
