PERELOMOV,2012-12-06 This book offers a systematic presentation of a variety of methods and results concerning integrable systems of classical mechanics The investigation of integrable systems was an important line of study in the last century but up until recently only a small number of examples with two or more degrees of freedom were known In the last fifteen years however remarkable progress has been made in this field via the so called isospectral deformation method which makes extensive use of group theoretical concepts The book focuses mainly on the development and applications of this new method and also gives a fairly complete survey of the older classic results Chapter 1 contains the necessary background material and outlines the isospectral deformation method in a Lie algebraic form Chapter 2 gives an account of numerous previously known integrable systems Chapter 3 deals with many body systems of generalized Calogero Moser type

related to root systems of simple Lie algebras Chapter 4 is devoted to the Toda lattice and its various modifications seen from the group theoretic point of view Chapter 5 investigates some additional topics related to many body systems The book will be valuable to students as well as researchers

Integrable Systems Ahmed Lesfari, 2022-07-13 This book illustrates the powerful interplay between topological algebraic and complex analytical methods within the field of integrable systems by addressing several theoretical and practical aspects Contemporary integrability results discovered in the last few decades are used within different areas of mathematics and physics Integrable Systems incorporates numerous concrete examples and exercises and covers a wealth of essential material using a concise yet instructive approach This book is intended for a broad audience ranging from mathematicians and physicists to students pursuing graduate Masters or further degrees in mathematics and mathematical physics It also serves as an excellent guide to more advanced and detailed reading in this fundamental area of both classical and contemporary mathematics

The Mathematical Heritage of Henri Poincare Felix E. Browder, 1983-12-31 On April 7 10 1980 the American Mathematical Society sponsored a Symposium on the Mathematical Heritage of Henri Poincaré held at Indiana University Bloomington Indiana This volume presents the written versions of all but three of the invited talks presented at

this Symposium those by W Browder A Jaffe and J Mather were not written up for publication In addition it contains two papers by invited speakers who were not able to attend S S Chern and L Nirenberg If one traces the influence of Poincaré through the major mathematical figures of the early and midtwentieth century it is through American mathematicians as well as French that this influence flows through G D Birkhoff Solomon Lefschetz and Marston Morse This continuing tradition represents one of the major strands of American as well as world mathematics and it is as a testimony to this tradition as an opening to the future creativity of mathematics that this volume is dedicated This part contains sections on topological methods in nonlinear problems mechanics and dynamical systems ergodic theory and recurrence and historical material

Linear Systems Panos J. Antsaklis, Anthony N. Michel, 2006-11-24 There are three words that characterize this work thoroughness completeness and clarity The authors are congratulated for taking the time to write an excellent linear systems textbook IEEE Transactions on Automatic Control Linear systems theory plays a broad and fundamental role in electrical mechanical chemical and aerospace engineering communications and signal processing A thorough introduction to systems theory with emphasis on control is presented in this self contained textbook written for a challenging one semester graduate course A solutions manual is available to instructors upon adoption of the text The book's flexible coverage and self contained presentation also make it an excellent reference guide or self study manual For a treatment of linear systems that focuses primarily on the time invariant case using streamlined presentation of the material with less formal and more intuitive proofs please see the authors companion book entitled A Linear Systems Primer

A New Lotka-Volterra Model of Competition With Strategic Aggression Elisa Affili, Serena Dipierro, Luca Rossi, Enrico Valdinoci, 2024-08-30 This monograph introduces a new mathematical model in population dynamics that describes two species sharing the same environmental resources in a situation of open hostility Its main feature is the expansion of the family of Lotka Volterra systems by introducing a new term that defines aggression Because the model is flexible it can be applied to various scenarios in the context of human populations such as strategy games competition in the marketplace and civil wars Drawing from a variety of methodologies within dynamical systems ODEs and mathematical biology the authors approach focuses on the dynamical properties of the system This is accomplished by detecting and describing all possible equilibria and analyzing the strategies that may lead to the victory of the aggressive population Techniques typical of two dimensional dynamical systems are used such as asymptotic behaviors regulated by the Poincaré Bendixson Theorem A New Lotka Volterra Model of Competition With Strategic Aggression will appeal to researchers and students studying population dynamics and dynamical systems particularly those interested in the cross section between mathematics and ecology
