

Introduction

1.1 Project Acer

Acer is implementing sap in "Project UCB" to have latest and standard version of software to make things flow in standard and fluent manner using SAP suite of applications.

1.2 Implementation Mythology

Project Acer is being implemented using Accelerated SAP (ASAP) methodology. SAP leverages a core set of methodologies and tools designed to deliver rapid, reliable results, and to help our customers get the most from their solutions. These include the ASAP Methodology for Implementation (content the project team follows to implement SAP software efficiently).

The ASAP methodology adheres to a specific road map that addresses the following five general phases:

➤ Project Preparation:

In this step the project team is identified and mobilized, the project standards are defined, and the project work environment is set up.

➤ Business Blueprint:

In this step the business processes are defined and the business blueprint document is designed.

➤ Realization:

In this step the system is configured, knowledge transfer occurs, extensive unit testing is completed, and data mappings and data requirements for migration are defined.

➤ Final Preparation:

In which final integration testing, stress testing, and conversion testing are conducted, and all end users are trained.

➤ Go-Live and Support:

In which the data is migrated from the legacy systems, the new system is activated, and post-implementation support is provided.

Effective Lifecycle Management of Healthcare Applications Susan Houston, Ryan Kennedy, 2020-01-24 The rapid growth of software applications within healthcare organizations has made it essential to have defined methodologies and formal processes for the management of the entire Information Technology IT portfolio Utilizing a portfolio management framework throughout an application s lifecycle will provide the necessary structure to ensure that all new applications are properly evaluated and once implemented remain relevant while continuing to meet organizational requirements While an organization may have a few large organization wide systems such as the Electronic Health Record EHR lab or radiology systems they also have a

large quantity of other clinical administrative and research systems Some larger organizations now have hundreds of software applications to support and manage The IT staff must be able to implement new requests while still maintaining the current application portfolio Utilizing a standard repeatable process will help to manage these large portfolios of software applications This book reviews the management of applications throughout their lifecycle from initial request through disposition Best practices dictate that every newly requested application undergoes analysis followed by an approval decision from the organization's governance committee The initial implementation project must include activities to prepare for ongoing support while ensuring the application is compliant with all security privacy and architecture requirements An application spends years in operations and maintenance where changes occur regularly through configuration and release management or additional projects The cycle continues until disposition Understanding when to dispose of an application is just as important as deciding when to implement a new one A defined process for disposing of an application ensures all parts are properly removed or destroyed
