This product was re-designed using a new manufacturing technology, which changed the physical appearance of the keypad electronics. The LED's changed to surface mount (chip LED's mounted on bottom of the circuit board which eliminates the need for the wire harnesses. It is also possible to control the red and green chip LED's externally, with an alarm panel for example, by using connector J1. See the diagram for details. Also, the voltage sensitive jumper on the main circuit board is no longer required.

Also, to avoid ESD (electro-static discharge) from interfering with the operation of the laptop, ground the negative terminal of the laptop to earth ground. If you cannot ground the power supply, then you must ground the laptop housing.
