way that the clinical situation is contrasted with a graphic representation for better understanding which is intended to point out special situations that can in turn positively influence the surgical planning of the intervention in order to avoid undesirable results in the individual case The book will have a reduced text part but with a lot of illustrations in order to show the surgeon who works image oriented the logic of the surgical procedure in a simple and clear way The graphic illustrations will illustrate the three dimensionality of the complex anatomy in the midface region close to the orbits and the skull base Illustrations must help where radiological images fall short The structure of the book will nevertheless be classic as the variations of the established techniques can only be understood on the basis of historical development A corresponding textbook that combines clinical situations with pre and postoperative radiological evaluation and graphic explanation does not exist to date It will appeal to a broad readership of students and professionals working within Oral and Maxillofacial Surgery Orthodontics Plastic and Craniofacial Surgery and Otorhinolaryngology
