are usually either intermittent metronome or continuous dynamic sound displays Similarly dance based interventions suggest that patients benefit from additional sensory information i e the temporal structure embedded in music and proprioceptive information from a dancing partner that facilities movement On the contrary studies dedicated to auditory perception and motor timing report an impaired ability of patients to perceive and synchronise with complex rhythmical structures i e causing an inability to play musical instruments With the growth of modern technology and the increasing portability of hi specification devices such as smart phones new research questions on the design of interventions are beginning to emerge as we strive for more efficient therapeutic approaches In this Research Topic we wanted to bring together top scientists from the movement disorder motor control and sound related studies along with therapists That way we can engage in cross disciplinary and challenging scientific debate about future rehabilitation avenues and frontiers for Parkinson s disease patients   The Role of Sound Groundwater Resources Management and Governance to Achieve Water Security International Centre for Water Security and Sustainable Management,UNESCO,2021-10-31   The Oxford Handbook of Irish English Raymond Hickey,2024 This volume offers a comprehensive overview of the range of varieties of English spoken on the island of Ireland It explores the historical background and structural features of Irish English alongside sociolinguistic considerations and will be of interest to readers in fields of varieties of English Irish studies and sociolinguistics   **PC Mag** ,1998-05-26 PCMag com is a leading authority on technology delivering Labs based independent reviews of the latest products and services Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology   *Cumulative Book Index* ,1925 A world list of books in the English language
