## Learning Goal

- Distinguish mathematical relationships as function, or relation by discussing their domain and range.
- Interpret and represent functions using equations written in function notation, tables, diagrams and graphs and connect them to applications.
- Develop efficient techniques for graphing the functions (quadratic, square root, reciprocal and absolute\* functions) including transformations (translation, compression/stretch and reflection).
- Understand the relationship between an inverse and its original function including its domain and range and find it from various representations.
- Leverage the composition\* of functions to accomplish multiple steps within a larger process.

## Success Criteria

- Determine if a mathematical relationship is a function or relation from various representations and explain why it is one or the other?
- Apply connections between various representations of functions (mapping diagrams, tables, graphs, and equations expressed using function notations) to solve problems including: evaluating for  $y$ ; solving for  $x$ ; and finding the equation of the function?
- Predict the transformations of a parent function (quadratic, square root, reciprocal, and absolute\*) and graph the function accurately and efficiently?
- Determine and apply the inverse of a function as an "undo" or "reverse" of the original function?
- Describe the relationship between the domain and range of an inverse and its original function?
