

Model 2 – The Selectively Permeable Cell Membrane

7. What two major types of biological molecules compose the majority of the cell membrane in Model 2?
Phospholipids and proteins.
8. How many different protein molecules are found in Model 2?
Four—two types of surface proteins and two types of membrane-spanning proteins.
9. What is the difference between the position of the surface proteins and the membrane-spanning proteins?
Surface proteins do not reach across the membrane, while membrane-spanning proteins do.
10. When a carbohydrate chain is attached to a protein, what is the structure called?
Glycoprotein.
11. When a carbohydrate is attached to a phospholipid, what is the structure called?
Glycolipid.
12. What types of molecules are shown moving across the membrane?
Small polar and nonpolar molecules.
13. Where exactly in the membrane do these molecules pass through?
Between the phospholipids.
14. How does the concentration of the small molecules inside the cell compare to that outside the cell?
More small molecules are outside the cell compared to inside, so the concentration is higher outside compared to inside.

Concepts of Membrane Structure Ronald Aloia, 2012-12-02. Membrane Fluidity in Biology Volume 1. Concepts of Membrane Structure covers membrane properties influenced by alterations in membrane lipid compositions and other organizational parameters that are encompassed by the term fluidity. This book is composed of eight chapters that discuss significance of fluidity changes in both normal and pathological cellular functions. This book starts by describing membrane structural organization and composition and arrangement of the molecular components of cell membranes. This is followed by discussions on structural properties of lipids and role of nonbilayer lipid structures in membrane fusion. The methodological approaches in study of cellular membrane structural diversity and fluid mosaic model for accurate representation of membrane fluidity are also discussed. This volume then describes the phenomenon of reversed or negative membrane images as viewed with transmission electron microscope. Chapters 6 and 7 explain the interaction of cytochrome P 450 with phospholipids and proteins in the endoplasmic reticulum and steps in the derivation of membrane structure and packing principles. Finally, the concluding chapter focuses on the membrane of the human red blood cell and presents

relatively simple arguments concerning its physical properties The book will serve as a primary source for research scientists and teachers interested in cellular membrane fluidity phenomena **The Membranes of Cells** Philip Yeagle, 1993 In this new edition of The Membranes of Cells all of the chapters have been updated some have been completely rewritten and a new chapter on receptors has been added The book has been designed to provide both the student and researcher with a synthesis of information from a number of scientific disciplines to create a comprehensive view of the structure and function of the membranes of cells The topics are treated in sufficient depth to provide an entry point to the more detailed literature needed by the researcher Key Features Introduces biologists to membrane structure and physical chemistry Introduces biophysicists to biological membrane function Provides a comprehensive view of cell membranes to students either as a necessary background for other specialized disciplines or as an entry into the field of biological membrane research Clarifies ambiguities in the field **Membrane Structure and Function**, 1987 Structure and Properties of Cell Membranes Gheorghe Benga, 2017 This book provides in depth presentations in membrane biology by specialists of international repute The volumes examine world literature on recent advances in understanding the molecular structure and properties of membranes the role they play in cellular physiology and cell cell interactions and the alterations leading to abnormal cells Illustrations tables and useful appendices complement the text Those professionals actively working in the field of cell membrane investigations as well as biologists biochemists biophysicists physicians and academicians will find this work beneficial Provided by publisher Mammalian Cell Membranes G. A. Jamieson, D. M. Robinson, 2014-05-20 Mammalian Cell Membranes Volume 1 General Concepts is a collection of papers that deals on the physical and chemical studies focusing on membrane structure and function This collection reviews the interpretation of the anatomy of the mammalian cell including its separation and cultivation The different methods of isolation of its surface membrane are then evaluated to bring some understanding of the subject More descriptions of the various physical techniques adopted to membrane constituents and to cell membrane research such as nuclear magnetic resonance electron spin resonance fluorescence and flash photolysis spectroscopy are given Discoveries of mitochondrial DNA and other techniques have increased investigation of the synthesis and components of functional mitochondria leading to different perspectives on models of membrane structure This book can serve the needs of biochemists and microbiologists in advancing their work research and understanding of mammalian cell membranes Membrane Structure J. Rothfield, 2014-06-28 Structure and Function of Biological Membranes explains the membrane phenomena at the molecular level through the use of biochemical and biophysical approaches The book is an in depth study of the structure and function of membranes It is divided into three main parts The first part provides an overview of the study of the biological membrane at the molecular level Part II focuses on the detailed description of the overall molecular organization of membranes The third part covers the relationship of the

molecular organization of membranes to specific membrane functions discusses catalytic membrane proteins presents the role of membranes in important cellular functions and looks at the membrane systems in eukaryotic cells Biochemists cell physiologists biologists researchers and graduate and postdoctoral students in the field of biology will find the text a good reference material Membrane Structure and Function W. Structure and Dynamics of Membranes R. Lipowsky, E. Sackmann, 1995-06-15 The first volume of the Handbook deals with the amazing world of biomembranes and lipid bilayers Part A describes all aspects related to the morphology of these membranes beginning with the complex architecture of biomembranes continues with a description of the bizarre morphology of lipid bilayers and concludes with technological applications of these membranes The first two chapters deal with biomembranes providing an introduction to the membranes of eucaryotes and a description of the evolution of membranes The following chapters are concerned with different aspects of lipids including the physical properties of model membranes composed of lipid protein mixtures lateral phase separation of lipids and proteins and measurement of lipid protein bilayer diffusion Other chapters deal with the flexibility of fluid bilayers the closure of bilayers into vesicles which attain a large variety of different shapes and applications of lipid vesicles and liposomes Part B covers membrane adhesion membrane fusion and the interaction of biomembranes with polymer networks such as the cytoskeleton The first two chapters of this part discuss the generic interactions of membranes from the conceptual point of view The following two chapters summarize the experimental work on two different bilayer systems The next chapter deals with the process of contact formation focal bounding and macroscopic contacts between cells The cytoskeleton within eucaryotic cells consists of a network of relatively stiff filaments of which three different types of filaments have been identified As explained in the next chapter much has been recently learned about the interaction of these filaments with the cell membrane The final two chapters deal with membrane fusion
