## **Memo Mathematics Pfeb March 2015:**

The Mathematics of Superoscillations Yakir Aharonov, Fabrizio Colombo, Irene Sabadini, Daniele C. Struppa, Jeff Tollaksen, 2017-04-25 In the past 50 years quantum physicists have discovered and experimentally demonstrated a phenomenon which they termed superoscillations Aharonov and his collaborators showed that superoscillations naturally arise when dealing with weak values a notion that provides a fundamentally different way to regard measurements in quantum physics From a mathematical point of view superoscillating functions are a superposition of small Fourier components with a bounded Fourier spectrum which result when appropriately summed in a shift that can be arbitrarily large and well outside the spectrum The purpose of this work is twofold on one hand the authors provide a self contained survey of the existing literature in order to offer a systematic mathematical approach to superoscillations on the other hand they obtain some new and unexpected results by showing that superoscillating sequences can be seen of as solutions to a large class of convolution equations and can therefore be treated within the theory of analytically uniform spaces In particular the authors will also discuss the persistence of the superoscillatory behavior when superoscillating sequences are taken as initial values of the Schrödinger equation and other equations Topologically Protected States in One-Dimensional Systems Charles Fefferman, James P. Lee-Thorp, M. I. Weinstein, 2017-04-25 The authors study a class of periodic Schrödinger operators which in distinguished cases can be proved to have linear band crossings or Dirac points They then show that the introduction of an edge via adiabatic modulation of these periodic potentials by a domain wall results in the bifurcation of spatially localized edge states These bound states are associated with the topologically protected zero energy mode of an asymptotic one dimensional Dirac operator The authors model captures many aspects of the phenomenon of topologically protected edge states for two dimensional bulk structures such as the honeycomb structure of graphene The states the authors construct can be realized as highly robust TM electromagnetic modes for a class of photonic waveguides with a phase defect **Reading Mathematics in Early Modern Europe** Philip Beeley, Yelda Nasifoglu, Benjamin

Wardhaugh, 2020-10-20 Libraries and archives contain many thousands of early modern mathematical books of which almost equally many bear readers marks ranging from deliberate annotations and accidental blots to corrections and underlinings Such evidence provides us with the material and intellectual tools for exploring the nature of mathematical reading and the ways in which mathematics was disseminated and assimilated across different social milieus in the early centuries of print culture Other evidence is important too as the case studies collected in the volume document Scholarly correspondence can help us understand the motives and difficulties in producing new printed texts library catalogues can illuminate collection practices while manuscripts can teach us more about textual traditions By defining and illuminating the distinctive world of early modern mathematical reading the volume seeks to close the gap between the history of mathematics as a history of texts and history of mathematics as part of the broader history of human culture **On Non-Generic Finite Subgroups of**

**Exceptional Algebraic Groups** Alastair J. Litterick, 2018-05-29 The study of finite subgroups of a simple algebraic group  $G$  reduces in a sense to those which are almost simple. If an almost simple subgroup of  $G$  has a socle which is not isomorphic to a group of Lie type in the underlying characteristic of  $G$  then the subgroup is called non generic. This paper considers non generic subgroups of simple algebraic groups of exceptional type in arbitrary characteristic. *Stable Stems* Daniel C. Isaksen, 2020-02-13 The author presents a detailed analysis of 2 complete stable homotopy groups both in the classical context and in the motivic context over  $\mathbb{C}$ . He uses the motivic May spectral sequence to compute the cohomology of the motivic Steenrod algebra over  $\mathbb{C}$  through the 70 stem. He then uses the motivic Adams spectral sequence to obtain motivic stable homotopy groups through the 59 stem. He also describes the complete calculation to the 65 stem but defers the proofs in this range to forthcoming publications. In addition to finding all Adams differentials, the author also resolves all hidden extensions by 2 and through the 59 stem except for a few carefully enumerated exceptions that remain unknown. The analogous classical stable homotopy groups are easy consequences. The author also computes the motivic stable homotopy groups of the cofiber of the motivic element. This computation is essential for resolving hidden extensions in the Adams spectral sequence. He shows that the homotopy groups of the cofiber of  $\alpha_1$  are the same as the  $E_2$  page of the classical Adams-Novikov spectral sequence. This allows him to compute the classical Adams-Novikov spectral sequence including differentials and hidden extensions in a larger range than was previously known.

### **Special Values of the Hypergeometric Series**

Akihito Ebisu, 2017-07-13 In this paper the author presents a new method for finding identities for hypergeometric series such as the Gauss hypergeometric series, the generalized hypergeometric series and the Appell Lauricella hypergeometric series. Furthermore using this method the author gets identities for the hypergeometric series and shows that values of  ${}_2F_1$  at some points can be expressed in terms of gamma functions together with certain elementary functions. The author tabulates the values of  ${}_2F_1$  that can be obtained with this method and finds that this set includes almost all previously known values and many previously unknown values. *Symmetry in Geometry and Analysis, Volume 1* Michael Pevzner, Hideko

Sekiguchi, 2025-02-09 *Symmetry in Geometry and Analysis* is a Festschrift honoring Toshiyuki Kobayashi. The three volumes feature 35 selected contributions from invited speakers of twin conferences held in June 2022 in Reims, France and in September 2022 in Tokyo, Japan. These contributions highlight the profound impact of Prof. Kobayashi's pioneering ideas, groundbreaking discoveries, and significant achievements in the development of analytic representation theory, noncommutative harmonic analysis, and the geometry of discontinuous groups beyond the Riemannian context, among other areas over the past four decades. The first volume of the Festschrift includes a survey article on Kobayashi's innovative contributions to Mathematics, emphasizing their influence and introducing new perspectives across various fields. Original articles contained in Volume 1 focus on differential geometry with symmetries, as well as algebraic and geometric aspects of representation theory of reductive Lie groups and related topics. Binder, 2022-12-06 A wide ranging history of the algorithm Bringing together the histories of mathematics computer science and linguistic thought Language and the Rise of the Algorithm reveals how recent developments in artificial intelligence are reopening an issue that troubled mathematicians well before the computer age How do you draw the line between computational rules and the complexities of making systems comprehensible to people By attending to this question we come to see that the modern idea of the algorithm is implicated in a long history of attempts to maintain a disciplinary boundary separating technical knowledge from the languages people speak day to day Here Jeffrey M Binder offers a compelling tour of four visions of universal computation that addressed this issue in very different ways G W Leibniz's calculus ratiocinator a

universal algebra scheme Nicolas de Condorcet designed during the French Revolution George Boole's nineteenth century logic system and the early programming language ALGOL short for algorithmic language These episodes show that symbolic computation has repeatedly become entangled in debates about the nature of communication Machine learning in its increasing dependence on words erodes the line between technical and everyday language revealing the urgent stakes underlying this boundary The idea of the algorithm is a levee holding back the social complexity of language and it is about to break This book is about the flood that inspired its construction

local communities was an attempt to domesticate and master the foreign body of the mission so as to create access to a larger world This book focuses on the ensuing struggle fought on many fronts including medium of instruction and textbook content with concomitant sub texts relating to gender roles and sexuality South Africa s educational history is to this day informed by networks of people and ideas crossing geographic and racial boundaries The colonial legacy has inevitably involved cultural mixing and hybridisation with paradoxically parallel pleas for purity Chisholm explores how these ideas found expression in colliding and coalescing worlds one African the other European caught between mission and apartheid education

Virtues Collective Virtues and Methods and Measurements And the chapters explore the most salient questions in this areas of research including How are individual intellectual virtues and vices affected by their social contexts Does being in touch with other open minded people make us more open minded Conversely does connection to other dogmatic people make us more dogmatic Can groups possess virtues and vices distinct from those of their members For instance could a group of dogmatic individuals operate in an open minded way despite the vices of its members Each chapter receives commentary from two other authors in the volume and each original author then replies to these commentaries Together the authors form part of a collective conversation about how we can know about what we know In so doing they not only theorize but enact social virtue epistemology
