Fuller, Carol Friedman, William Hersh, 2006-07-19 Knowledge Management and Data Mining in Biomedicine covers the basic foundations of the area while extending the foundational material to include the recent leading edge research in the field The newer concepts techniques and practices of biomedical knowledge management and data mining are introduced and examined in detail It is the research and applications in these areas that are raising the technical horizons and expanding the utility of informatics to an increasing number of biomedical professionals and researchers These concepts and techniques are illustrated with detailed case studies Suing the United States National Academy of Sciences Victor W Chang, Guoping Song, 2020-06-30 This book will emphatically argue that human beings and chimpanzees have never shared a common ancestor nor did humans undergo evolution or microevolution Moreover this book will discuss the serious mistakes and misleading guidance the book published by NAS National Academy of Sciences Science Evolution and Creationism makes Their argument that human beings and chimpanzees share a common ancestor is wrong without any scientific basis They also claim that the Theory of Evolution is the cornerstone of modern sciences However the facts shown by DNA codes proved that the Theory of Evolution is wrong Based on a wrong viewpoint as the cornerstone NAS suppresses and impedes the development of science NAS members are leaders in American sciences Therefore they have to bear the necessary responsibility Modern science has determined that hereditary information of all living species is totally defined by its own DNA coding sequences Unique DNA codes define a unique species The overall DNA coding sequences keep high fidelity during the genetic breeding of various species thereby helping scientists find sources of any species Since biological features of all species depend on their own DNA codes DNA codes must be the only correct direction and method for understanding the origin of species **DNA Coding, the Core of Life Sciences** Victor W Chang, Guoping

Song, 2020-06-26 For over one hundred years before DNA coding was discovered the Theory of Evolution dominated biology We can call the biology of that era as Pre DNA Biology During this era generations of biologists inherited biological theories derived from the Theory of Evolution Thus these biologists cannot understand the error of the Theory of Evolution However science does not follow human will The conclusions expressed by DNA coding conflict with the foundations of the Theory of Evolution The fact that the DNA coding of all humans have consistent sequences shatters the premise of the Theory of Evolution namely that evolution is random The uniqueness in the number and karyotypes of biological chromosomes prevents the production of new species through continuous and slight change DNA coding gives new life to biology by revealing the inherent secret of living creatures Thus Post DNA Biology must be established In this new era of biology the most urgent task is to understand the inherent nature of living creatures through DNA coding which consists of DNA decoding and mathematic What Evidence Shows that DNA Was Created by the God? Victor W. Chang, Guoping Song, 2020-07-04 Where do we come from Who are we Where are we going These three guestions continue to haunt human beings since ancient times and they are questions without any explanations. The important conclusions from the human genome test of the DNA coding sequence The autosomes are not different between men and women These conclusions irreversibly refute the traditional theory of evolution We have raised this simple question to seven M D Ph D including three professors who specialize in biology Why are autosomes not different between men and women Invariably their answer was either I cannot explain or I don t know To me as a computer engineer the human genome is equivalent to a software package If we are certain that the 2.9 billion codes of autosomes are not different between men and women then the autosomes must be from the same source sequence of coding I am sure that such a huge coding sequence must have a maker He made the human genome Now we can reach another conclusion the first woman came from the first man by the fact that the 2 9 billion codes of autosomes are not different between men and women The next conclusion is that the first man never came from a woman and he must have neither physical parents nor a regular physiological birth This is a key to open the origins of mankind DNA reveals to us the truth that God created life A Concise Introduction to Programming in Python Mark J. Johnson, 2011-12-21 Suitable for newcomers to computer science A Concise Introduction to Programming in Python provides a succinct yet complete first course in computer science using the Python programming language The book features Short modular chapters with brief and precise explanations intended for one class periodEarly introduction of basic procedural **The Origin of Species by DNA Coding** Victor W Chang & Guoping Song, 2020-06-15 Who are we Where are we cons from These questions have troubled people for centuries The textbooks have long taught us that human beings evolved from anthropoid apes Today a new science molecular anthropology tells us this 7 billion human beings in the world share a common grand grand father the Y chromosome Adam and share a common grand grand mother the Mitochondrial Eve After reading information in this book you will be convinced that human beings could not be the result of evolution sudden

mutation or in any way related to the anthropoid apes DNA Witnessed God's Creation Victor W Chang, Guoping Song, 2020-07-04 Who are we Where are we from These questions have troubled people for centuries Textbooks have long taught us that humans evolved from apes Today a new science Molecular Anthropology tells us that nearly 7 billion humans in the world share a common grand grand father the Y chromosome Adam And they also share a common grand grand mother the Mitochondrial Eve The difference in DNA coding is only one thousandth between any persons in the world After reading this book you will be convinced that humans could not have been the result of Evolution In 1987 Professor Allan Wilson's research team at UC Berkeley proposed the Mitochondrial Eve Theory by DNA coding that all humans originated from one woman who lived about 200 000 years ago In 1995 Drs Dorit et proposed the Adam Theory by DNA coding of Y Chromosomal that all humans originated from one man There are two kinds of DNA encoding in our body chromosomal DNA and mitochondrial DNA The chromosome consists of three types autosome Y chromosome and X chromosome The Eve Theory is founded on the mitochondrial DNA while the Adam Theory is founded on the Y chromosome So what can we see from the autosome The simple biological fact that there are no differences between the autosomes of male and female tells us a striking truth that is the autosome of all men in the world must come from only one original version and cannot be produced randomly Therefore the authors of this book have established a The only one Adam theory by the consistency of autosomal DNA coding of men and women All human beings on earth came from him and the earliest female ancestor came from this male ancestor In addition we also provide you with an answer which science cannot offer Creationism Proceedings of the Second International Conference on Soft Computing for Problem Solving (SocProS 2012), December 28-30, 2012 B.
