By the bestselling author of *Four Fish* and *American Catch*, an eye-opening investigation of the history, science, and business behind omega-3 fatty acids, the miracle compound whose story is intertwined with human health and the future of our planet. Omega-3 fatty acids have long been celebrated by doctors and dietitians as key to a healthy heart and a sharper brain. In the last few decades, that promise has been encapsulated in one of America's most popular dietary supplements. Omega-3s are today a multi-billion dollar business, and sales are still growing apace, even as recent medical studies caution that the promise of omega-3s may not be what it first appeared. But a closer look at the omega-3 sensation reveals something much deeper and more troubling. The miracle pill is only the latest product of the reduction industry, a vast global endeavor that over the last century has boiled down trillions of pounds of marine life into animal feed, fertilizer, margarine, and dietary supplements. The creatures that are the victims of that industry seem insignificant to the untrained eye but turn out to be essential to the survival of whales, penguins, and fish of all kinds, including many that we love to eat. Behind these tiny molecules is a big story.

of the push and pull of science and business of the fate of our oceans in a human dominated age of the explosion of land food at the expense of healthier and more sustainable seafood of the human quest for health and long life at all costs James Beard Award winning author Paul Greenberg probes the rich and surprising history of omega 3s from the dawn of complex life when these compounds were first formed to human prehistory when the discovery of seafood may have produced major cognitive leaps for our species and on to the modern era when omega 3s may point the way to a bold new direction for our food system With wit and boundless curiosity Greenberg brings us along on his travels from Peru to Antarctica from the Canary Islands to the Amalfi Coast to reveal firsthand the practice and repercussions of our unbalanced way of eating Rigorously reported and winningly told *The Omega Principle* is a powerful argument for a more deliberate and forward thinking relationship to the food we eat and the oceans that sustain us **The Schenley Experiment** Jake

Oresick, 2017-04-14 *The Schenley Experiment* is the story of Pittsburgh's first public high school a social incubator in a largely segregated city that was highly even improbably successful throughout its 156 year existence Established in 1855 as Central High School and reorganized in 1916 Schenley High School was a model of innovative public education and an ongoing experiment in diversity Its graduates include Andy Warhol actor Bill Nunn and jazz virtuoso Earl Hines and its prestigious academic program and pensions lured such teachers as future Pulitzer Prize winner Willa Cather The subject of investment as well as destructive neglect the school reflects the history of the city of Pittsburgh and provides a study in both the best and worst of urban public education practices there and across the Rust Belt Integrated decades before *Brown v Board of Education* Schenley succumbed to default segregation during the white flight of the 1970s it rose again to prominence in the late 1980s when parents camped out in six day long lines to enroll their children in visionary superintendent Richard C Wallace's reinvigorated school Although the historic triangular building was a cornerstone of its North Oakland neighborhood and a showpiece for the city of Pittsburgh officials closed the school in 2008 citing over 50 million in necessary renovations a controversial event that captured national attention Schenley alumnus Jake Oresick tells this story through interviews historical documents and hundreds of first person accounts drawn from a community indelibly tied to the school A memorable important work of local and educational history his book is a case study of desegregation magnet education and the changing nature and legacies of America's oldest public schools *Women in Science Now* Lisa

reform landscape in urban education In Follow the Money Sarah Reckhow shows where and how foundation investment in education is occurring and presents in depth analysis of the effects of these investments within the two largest urban districts in the United States New York City and Los Angeles In New York City centralized political control and the use of private resources have enabled rapid implementation of reform proposals Yet this potent combination of top down authority and outside funding also poses serious questions about transparency responsiveness and democratic accountability in New York Furthermore the sustainability of reform policies is closely linked to the political fortunes of the current mayor and his chosen school leader While the media has highlighted the efforts of drastic reformers and dominating leaders such as Joel Klein in New York City and Michelle Rhee in Washington D C a slower but possibly more transformative set of reforms have been taking place in Los Angeles These reforms were also funded and shaped by major foundations but they work from the bottom up through charter school operators managing networks of schools This strategy has built grassroots political momentum and demand for reform in Los Angeles that is unmatched in New York City and other districts with mayoral control Reckhow s study of Los Angeles s education system shows how democratically responsive urban school reform could occur pairing foundation investment with broad grassroots involvement Bringing a sharp analytical eye and a wealth of evidence to one of the most politicized issues of our day Follow the Money will reshape our thinking about educational reform in America
